Always Up, Always On, Always Alive

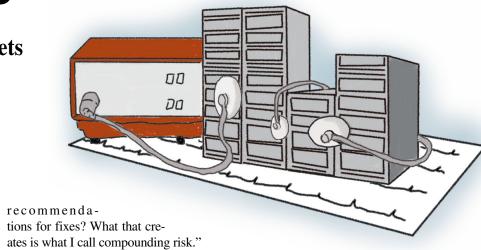

Tips On Maintaining Your Data Center's Physical Assets

by David Garrett

MIKE HAGAN, senior vice president of Lee Technologies, has strong opinions about keeping a data center running.

As well he should. His firm maintains and staffs data centers for clients such as Microsoft, Earthlink, BellSouth, and the Pentagon, to name a few. And maintenance, he says, is one of the hardest tasks his clients face.

"If you look at a data center today, there's UPS, air conditioning, generators, PDUs, and it usually amounts to between 10 to 15 major pieces of equipment." Three to four preventive maintenance visits per year add up to 60 visits to manage. "Who's going to schedule them all?" he asks. "Who follows up on

To fight the problem, Lee Technologies devised TIMS, or Tiered Infrastructure Maintenance Standards, a proposed standard for data center maintenance for large and small centers alike. But whether you're running 10 servers or 10,000, you'll need expert advice on maintaining your infrastructure.

Power Management

Failing to maintain or test grounds is one of data center experts' most frequent mistakes, says Jeff Oakes of Sterling Oakes Go to Page 11

PC Planning

Buy A Computer For The Next Three Years

by John Brandon

IN MOST AREAS of IT, crystal ball gazing is not a recommended practice. It's too difficult to plan for a technology that may or may not exist in three years, and most experts who consult small and midsized companies will tell you to first examine your business needs today and then plan for the future. In fact, by examining current needs, it's often possible to predict (to some extent) the needs of tomorrow.

Yet, a recent comment by Lenovo product manager Stephen Miller seems to suggest the opposite: "Don't buy a computer for today; buy a computer for the next three years." While the logic of this quote might seem to contradict common business advice about your current needs dictating business plans, there's an underlying truth that reveals how markedly

different a PC buying decision is from other purchases. The PC market is volatile and unpredictable, and trend forecasting is more difficult than, say, storage requirements or server usage over long periods.

Life Span

"You have to think about the average life of a computer, which is just a few years," says Howard Locker, chief architect

"The most critical specification overall is: Will this system run Vista when it starts shipping next year."

- Gateway's Marc Demars

for mobile and desktop computing at Lenovo, elaborating on the company position about SME PC purchasing decisions. "Upgrading is very difficult on both notebooks and desktops, so buying a PC that will last for three years makes more financial sense for most businesses."

Locker notes that the top four components in a computer to consider are RAM, hard disk capacity and speed, processor, and graphics. According to Locker, RAM is the top priority because it can have the greatest impact on computing speed for the majority of end users. He lists hard disk capacity and speed as second because it allows employees to do more with their computer down the road and won't limit them to certain activities, such as only working on business documents. He lists processing speed third because CPU horsepower is generally fast on most

Intel, AMD Cut Processor Prices

CONTINUING THE FIERCE competition between AMD and Intel, the two companies recently made significant changes in prices for their processors. The price cuts should result in lower prices for desktops and notebooks within the next few months. The biggest Intel price cuts were in its desktop chips, with many chip prices being dropped 40% to more than 60%. Prices for Intel's server and workstation processors were unchanged, and notebook processor prices dropped slightly. AMD also cut prices on both notebook and desktop chips; desktop processors were dropped by as much as 57%, while prices for notebook chips dropped by as much as 26%.

Avaya Names New CEO, Posts Profits

Louis D'Ambrosio will become Avaya's new president and CEO, replacing current Chairman and CEO Donald Patterson. The move came as Avaya announced earnings that were significantly lower than a year ago. During the quarter ended June 30, Avaya earned \$44 million, or 10 cents per share, compared to \$194 million, or 41 cents per share a year ago. D'Ambrosio says much of Avaya's future success will rely on its strength in the VoIP market. The company's IP line shipments increased more than 20% during the past quarter.

Symantec Posts Q1 Earnings

LARGELY DUE TO INCREASING operating expenses, which rose to \$824.1 million during a recent quarter from \$350.8 million last year, Symantec reported a drop of 52% in its fiscal first quarter profit, from \$199 million in Q1 last year to \$95 million this year. Symantec's earnings per share was 9 cents, down from 27 cents a share. However, the company beat Wall Street estimates in revenue, which increased from \$699 million last year to \$1.26 billion. The revenue breakdown showed 38% from security and data management business, 30% from consumer business, and 27% from data center management business.

Sun Revenue Beats Projections

SUN MICROSYSTEMS' revenue for the previous quarter jumped 29% to \$3.83 billion, well above the expected average of \$2.13 billion. However, the company lost \$301 million, or about 9 cents per share, primarily because of restructuring charges and costs related to about 5,000 job cuts. The company had encouraging news, though, with its overall server shipments increasing about 15% during the past quarter. Sun CEO Jonathan Schwartz says, "Of the systems we distribute, 60% went to customers who never have done business with Sun before. It is safe to say we have entered a new era, where we are attracting new customers."

HP Buys Mercury Interactive

HP PLANS TO PAY \$4.5 BILLION, or \$52 per share, to acquire Mercury Interactive, a software maker specializing in IT governance and testing products. Mercury's line of tools will fit into HP Software, which HP predicts will have revenue of \$2 billion annually with Mercury's additions.

HP says it believes the acquisition will help it be a stronger competitor to rivals CA and IBM; the deal is slated to close in the fourth quarter.

BSA Collects \$2 Million In Settlements

THE BSA (Business Software Alliance) announced last week that it has collected settlements totaling more than \$2 million from 19 U.S. companies that were using illegal copies of software. The BSA is a watchdog group that represents the country's largest software manufacturers. The companies involved in the settlement agreed to delete any unlicensed software, buy appropriate replacements, and enhance software management practices in addition to making the payments. According to the BSA, companies can be fined up to \$150,000 for each copied software title.

Google Lags In China

GOOGLE RANKS THIRD among search engines in China, according to research from Analysys International. During the first quarter of this year, Google had a 13.2% share of the market, well behind Baidu.com's 43.9% share and Yahoo! China's 21.1% share. China's search engine market was worth about \$37.7 million during the quarter. Google says 42% of its total revenue comes from outside the United States, although it doesn't break down that revenue by country.

India Still An Attractive Outsourcing Option

INDUSTRY ANALYSTS REPORT that many companies still consider India an attractive option for outsourcing, despite warnings from Indian outsourcing firms Satyam Computer Services and Wipro that quarterly profit margins could be hurt by salary increases. Specifically, Forrester says salaries for Indian staff who work in the IT services delivery arena are rising an average of 12 to 15% per year. India has a competitive advantage over other countries partly because it turns out such a high number of software engineering graduates each year. Accenture, Capgemini, and IBM are among the global companies expanding operations in India.

Click Fraud Settlement Given The OK

A \$90 MILLION SETTLEMENT between Google and advertisers was approved by a judge in Arkansas last week. The advertisers have claimed that Google billed them incorrectly for ad clicks that weren't from legitimate customers interested in their products. The settlement was called "fair, reasonable, and adequate" by Judge Joe Griffin of the Miller County Circuit Court. Although advertisers won't receive a cash payment as part of the settlement, they will receive credit toward advertising that's equivalent to a \$3.80 refund for every \$1,000 spent on advertising during the last four and a half years.

■ IBM Changes Software Pricing

IBM HAS CHANGED its pricing scheme, so software pricing better reflects new technologies, such as multicore processors and virtualization. The change, which began last week, will charge customers based on "processor value units" instead of actual processors. Although actual prices won't change initially at IBM, the way customers are charged will change. So, for example, instead of purchasing a single software license, a customer will now have to purchase 100 processor units for a single-core system and 200 processor units for a dual-core system.

Cisco VPNs Vulnerable To DoS Attacks

THE IKE (Internet Key Exchange) Protocol used by the VPN 3000 Series of concentrators by Cisco has a flaw that could leave the devices vulnerable to DoS attacks. The IKE Protocol enables remote IPsec VPN access. A hacker could potentially overwhelm a VPN 3000 Series concentrator with IKE requests, so it was unable to handle legitimate traffic. The vulnerability was discovered in July 2005 by Roy Hills, security researcher at NTA Monitor, and posted on the Full Disclosure mailing list last week.

New CFO At CA

SOFTWARE VENDOR CA has appointed Nancy Cooper to be the new chief financial officer. She will replace Bob Cirabisi, who has been filling in since Bob Davis left the position in May. Cooper was previously CFO at IMS Health, a medical business intelligence firm; Reciprocal, a digital rights management company; and Pitney Bowes Credit, a credit firm. Cooper joins CA at a pivotal time: Due to complications with subscription revenue accounting and employee stock options granting, CA delayed filing its Q4 and fiscal 2006 results for the second time. Although there are rumors of layoffs, CA has not commented on them.

This information provides a quick glimpse of current and historical stock prices and trends for 16 major companies in the technology market.

Company	Symbol	Year Ago	July 24 \$	July 31 \$	% change from previous week

BUYERS' GUIDE MARKET WATCH

Disk-To-Disk & Tape-To-Disk

While Disk Is Making Lots Of Noise As A Backup Contender, Tape Just Won't Go Away

by Paul Ferrill

BACKUP HAS GOT TO BE one of the least favorite chores for most IT administrators. It's something that has to be done well, and if it isn't, it could cost you your job. Many companies have looked at everything from completely automated systems to remote backup services to make the job easier.

Tape-based backup systems have been the primary means of protecting important data for almost as long as computers have been around. While the form factor and storage capacity has made it possible to store more with less, the basic process hasn't changed much at all. Load a tape, copy your data to it, and store the tape some place safe.

Automation is not a new game either. Robotic tape loaders have been around for more than 20 years. Mechanical autoloaders make it possible to queue up a stack of tapes to handle most of the tape changing tedium. Higher capacity tapes mean you don't have to change tapes as often. All these improvements help but still don't seem to meet every need.

Ways & Means

Today's technologies offer a number of viable ways to solve the backup problem. As with any technology, it often comes down to time and money. There are some companies that offer nearinstantaneous recovery through hot failover-type systems. If you really need that type of system, you probably have the money to pay for it.

Disk-to-disk backup systems are really nothing new. The simplest form is disk mirroring where you configure two identical disks or disk subsystems to write identical copies of data to both. If one fails, you replace it and rebuild the mirror. It's essentially the same as RAID 1. While disk mirroring might not qualify as a true backup solution in that it doesn't save a copy of your data, it does meet the reliability needs for many situations.

One way to measure any solution is the amount of time it takes to complete the backup process. This is often referred to as the "backup window." For some types of applications you must temporarily suspend operation to access files that would normally be locked for exclusive use. If those are important database files, the backup window time can become critical. Disk-to-disk systems offer the fastest backup speeds and the shortest backup window possible.

Idealstor

As disk-drive costs continue to decline, many companies are beginning to look at using removable disks as their primary backup medium. Idealstor positions its products to replace tape by using any brand IDE or SATA disk as the target for a backup. Each disk is configured to be physically ejected once the backup operation has been completed and then stored locally or taken offsite.

The Idealstor Backup Appliance runs Microsoft's Windows 2000 (1- and 2-bay models) or Windows

Backup Appliance: From \$4,395 for the

Overland Storage

REO Series: From \$3,995 to \$18,500 **NEO Series:** From \$9,800 to \$75,000 ARCvault: \$4,995 and \$5,994

REO offers high-end, disk-based stor-ARCvault can be a remote tape solution

www.Processor.com/Overland

organizations needing to meet certain regulatory requirements for data archiving and retrieval. Intradyn has a strategic partnership with Sony to use AIT drives configured for WORM (writeonce, read-many) operation. This makes it possible to write critical data such as email to a media that can't be altered.

Overland Storage

The REO series from Overland Storage is a disk-based appliance that looks like either a virtual tape library or disk volume to the host system. It's possible to configure a single REO with up to 32 virtual tape drives,

> 180 virtual tape cartridges, and four library partitions. The REO also supports up to 64 LUNs (disk volumes). REO integrates well with existing iSCSI or Fibre Channel networks and is simple to configure.

The built-in REO soft-

ware provides a core set of volume and device virtualization, connectivity, and management tools. REO delivers high-end performance for greatly reduced backup times and near-instantaneous recovery. REO models start with 1TB of raw capacity and can be expanded up to 44TB.

Tape is still the preferred media for most companies when it comes to long-term storage. Overland offers its NEO series tape libraries as either a standalone backup solution or in conjunction with its REO products for a diskto-disk-to-tape solution. It has just recently introduced an entry-level ARCvault tape product targeted at the SME market or as a remote office solution.

Revinetix

Sentio is the Revinetix product name for its appliance providing backup for an entire LAN. Sentio

Revinetix

Starts at \$5,995 for 500GB capacity and goes up to \$34,995 for 5.6TB

Delivers a unique solution to enterprise backup with a proprietary operating system and client application

www.Processor.com/Revinetix3

is based around a proprietary operating system, RevOS, and a client-side application, making it possible to accomplish bare metal recovery of an individual user's system partition. RevOS also supports offsite mirroring to another Revinetix appliance for additional protection.

Revinetix uses its trademarked Disk2Disk2Disk technology to archive critical data to removable SATA disks for offsite storage. It also supports standard external USB drives as a target backup

SNAPSHOT

Up to \$150,000-plus for an enterpriseclass solution

Delivers high-end protection for missioncritical data; makes it possible to roll back to virtually any instant in time to overcome any data corruption related problem

www.Processor.com/Revivio

medium. Sentio incorporates data compression to cram more data into the available disk space.

Revivio

The Continuous Protection System model 1200 is Revivio's entry into the high-end data protection market. Revivio uses patent-pending technology to provide instant access to all volumes used by an application as they existed at any previous point in time up to the limits of your online storage. This type of system virtually eliminates any backup window, as the data typically does not need to be restored from tape.

One design feature of this type of system is that the storage sits outside the normal application data path and does not affect performance in any way. Revivio's solution is block-based, meaning it functions outside the normal file system. It also provides specific application support modules for databases, Microsoft Exchange, Lotus Notes, and others.

Buying Tips

Make a determination of how time critical your data is. In the case of a failure, how quickly do you really need that data back online?

How much of your critical data do you need to restore as quickly as possible? For high-volume Web sites, that could mean everything. Email might not be as critical.

Know what regulatory compliance measures you must meet. Tape works best for creating a nonalterable backup copy of archived email.

Don't forget the cost of labor when you analyze the difference between systems.

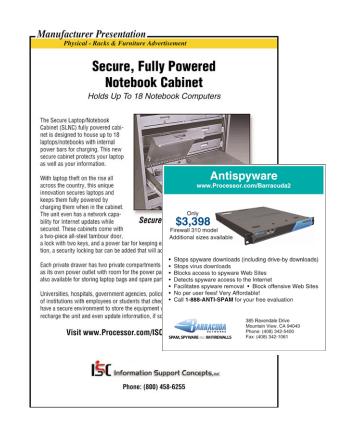

To see *Processor* Showcase advertisements for products in this category, look in the Showcase Index on page 5 and find the D2D & Disk/Tape Systems ads under End Nodes/Storage/Backup.

age; NEO tape libraries can be used alone or with REO products; and

Use PROCESSOR. To Find Product Information Fast!

Processor contains detailed information on hundreds of products geared toward the data center. We make finding the products you need easy with our color-coded sections.

Each product **Showcase** or **Manufacturer Presentation** has a color bar at the top. Simply identify the product category and related color you're looking for from the list on the right (Services, Software, End Nodes, Communications, or Physical Infrastructure) then flip through the publication to find the product section you want.

RF Spectrum Analyzer For Wi-Fi Networks

Is it my Wi-Fi equipment or the RF environment?

Spectrum congestion in the unlicensed 2.4GHz and 5GHz bands is a leading cause of problems in 802.11 deployments. Growing evidence from wireless infrastructure providers suggests that 30% of problems reported by Wi-Fi customers are actually due to interference. Interference can come from nearby 802.11 networks as well

as from a long list of common non-802.11 devices, including cordless phones, wireless surveillance cameras, Bluetooth devices, and microwave ovens. Typical network analysis tools are blind to RF activity. OmniSpectrum provides engineers with a portable, easy-to-use solution for determining which devices, Wi-Fi and non-Wi-Fi, are using the spectrum, and which are jeopardizing the delivery of Wi-Fi traffic.

WildPackets' OmniSpectrum

OmniSpectrum enhances 802.11 network analysis by identifying not just other 802.11 devices, but any devices that are generating signals in the 802.11 frequency band, even devices that are unauthorized or transient. Based on patented spectrum intelligence technology from Cognio, OmniSpectrum identifies not only the class of the interfering device, such as a cordless phone, but possible manufacturers and model numbers of the offending equipment, facilitating problem identification and resolution. OmniSpectrum provides the best first line of defense in diagnosing 802.11 problems and complements WildPackets' wireless network analysis products.

OmniSpectrum, which includes a Windows application and a CardBus PC card, costs \$3,995.

A New Self-Learning Technology

The Radware DefensePro behavioral DoS attack protection module protects against zero-day and unknown attacks. The new appliance protects against viruses, worms, Trojans, and Denial of Service attacks at 3Gb speeds to prevent application-level attacks. Built on top of the highest-performance Security Switch in the market, DefensePro delivers maximum throughput and advanced security intelligence to isolate, block, and prevent attacks in real-time from headquarters to regional and branch offices.

The DefensePro features inline security switching and accelerated, stateful, deeppacket inspection—using Radware's industry-leading StringMatch Hardware

Engine™—to bidirectionally scan and protect all network traffic against application-level attacks.

DefensePro Application Security immediately isolates attacks by dynamically managing bandwidth to stop propagation across users and resources while ensuring the complete continuity and performance of all secure traffic to proactively control impact

and limit damage. Intercepts more than 1,500 malicious signatures, hidden worms, and viruses, blocking application attacks at multi-gigabits/second. Identifying and mitigating protocol and traffic anomalies in real-time, DefensePro prevents DoS/DDoS and SYN floods, safeguarding against all illicit traffic patterns and hacking.

Combining high processing power with advanced application-security services, DefensePro secures mission-critical applications across high-speed/high-capacity environments. Call, email, or visit our Web site today to see the DefensePro 3.0 IPS Flash Presentation.

Communications - Serial Networking Advertisement

Four-Port Serial Server

The EtherPathX4 is a four-port serial server for Ethernet LANs. The EtherPathX4 connects any async serial device through a LAN and between LANs via routers. The EtherPathX4 will also connect other serial devices, such as remote data collection terminals, SCADA RTU/Host systems, UPSes, bar code scanners, alarms, access control, timeclocks, climate control devices, and serial management ports, directly to an Ethernet network.

The EtherPathX4 supports TCP/IP, allowing the necessary data connection across networks as well as connections between hosts on a network and the device attached to the EtherPathX4 server.

The EtherPathX4 supports serial interface speeds up to 230Kbps. The EtherPathX4 can automatically open connections when it powers up, eliminating the need for a manual request. Modem controls (RTS/CTS) and Xon/Xoff are also supported. If the connection is lost, the EtherPathX4 will automatically reconnect when the LAN path is again available.

Access Point with BusinessSpecific Features

Key Features

- Clustering functionality makes adding additional access points (APs) to your network "turnkey"—security settings and other operational parameters are securely downloaded into each new AP automatically
- Dynamic Channel Planning and Auto Channel Selection simplifies initial channel assignments and assure APs maintain optimal channel configuration
- Easily managed with Web interface, Telnet, and SSH or through third-party SNMP-capable management software
- Neighborhood AP Detection assures you know what other APs are within range of your network
- Network health monitoring, including: Status, throughput, security, RF interference, connected clients, and more
- Wireless Multimedia (WMM) QoS support for prioritizing bandwidth for delay-sensitive applications such as VoIP
- Multicast support for streaming video/audio
- Load balancing shares the connectivity load evenly across multiple APs
- Advanced wireless security suite: WiFi Protected Access 2 (WPA2)/802.11i, WPA, and 64/128-bit WEP encryption
- Complete compatibility with standard 802.11b and 802.11g wireless technologies
- Includes Bridge mode for connecting multiple LANs and Repeater mode for extending the reach of wireless networks without running additional Ethernet cables

935 National Parkway Schaumburg, IL 60175 **Toll Free: (866) 877-2827** www.Processor.com/USRobotics

ASA COMPUTERS

Want your business to be more productive?

The ASA. Servers powered by the Dual Core Xeon™processor provide the quality and dependability to keep up with your growing business.

Hardware systems For The Open Source Community-since 1989 (Linux, FreeBSD, NetBSD, OpenBSD, Solaris, MS, etc.)

Product Feature

- Rack solid Quality rackmount system with excellent cooling.
- Custom OS including Linux, Solaris
 *BSD, MS Windows, Suse, Debian, etc.
- Hardware and softwarea Raid storage.
- High density cluster nodes.
- SATA SCSI SAS Fiber Raid
- iSCSI and NAS storage appliances.
- Highend custom workstations.
- On-site warranty support for most of our products.

Dempsey/Woodcrest Server Starts at

\$2024

- 1U Dual Core 5030 CPUs.
- 4GB FBDIMM Memory.
- Supports upto 64GB FBDIMM.
- 120 GB hotswap hard drive.
- 2xIntegrated Dual 10/1000 LAN.

Dual Xeon Server Starts at

CONTRACTOR CONTRACTOR

\$4015

- 5U Dual Xeon 2.8 Ghz 800 FSB.
- iSCSI or NAS Software options.
- 8x120 GB Sata Hard drives -Upto 18TB.
- 512 MB RAM
- Fail hard drive LED indicator.

Your Custom Appliance Solution

Let us know your needs, we will get you a solution.

Value Server V210 Starts at

\$528

- -1U 14" Deep 260W.
- Celeron 2.4 Ghz CPU.
- 512MB PC3200 DDR ECC Unbuffered.
- Support upto 2GB DDR RAM.
- 80GB Hard Disk.
- 2x 10/1000 Mbps LAN.

Custom OEM Solution

- Custom chassis design as per your needs for your appliances.
- Custom logo printing.
- Facilitating in getting various certifications like FCC/UL/CE, etc.
- -Custom install of your images.
- -Drop ship on your behalf.

Technical Expertise

We have a highly qualified technical and engineering team consisting of Redhat, BSD, MCSE, CCNA, and CNE certified engineers. They are dedicated to address any issue you may have with our hardware products. Our sales engineers are expert in providing you solution that suits your needs while keeping your budget low.

Dual Xeon 800FSB Storage Starts at

\$6,644

- 8U Dual Xeon 2.8 Ghz 800FSB CPUs.
- 2TB of storage (36TB max).
- 1GB RAM
- NAS or iSCSI softwre options
- $-2 \times 10/100/1000$ Gigabit LAN.

We provide approved EVAL server for 10 days.

Why Do Business With ASA:

Since 1989, ASA has served customers like Cisco, Juniper, Caltech, Fermilab, and most Universities. We provide total custom solution with OS of your choice. Excellent pre-sales and post-sales support. Reliable hardware at most competitive prices. Please call or contact us for your next hardware purchase.

The Best Defense Against Application Threats

Next-Generation Web Application Security

WebDefend is a next-generation Internet security appliance that provides comprehensive Web application protection to resolve information security challenges such as identity theft, information leakage, regulatory compliance, and insecurely coded applications.

network-level security by providing customized, behavior-based app security.

WebDefend's unique architecture allows for a central point of intelligence with flexible, distributed prevention, allowing organizations to leverage investments in existing inline network devices. As a noninline Internet security appliance, WebDefend is easy to deploy, does not introduce network latency, and can not negatively impact production network traffic.

WebDefend Benefits

- Protects privileged information, trade secrets, intellectual property
- Dynamically generates and automatically maintains application security profiles
- Uncovers SSL-encrypted threats
- Provides distributed prevention with its Distributed Detect Prevention Architecture (DDPA)
- Detects outbound as well as inbound threat anomalies with ExitControl™ technology
- Provides intuitive GUI and detailed event analysis through the WebDefend Console
- Provides application security against known and unknown Web threats
- Delivers detailed and summary reports for security, compliance, and audit needs

Professional organized criminals are now targeting the theft of valuable data connected to Web browsers. WebDefend's unique combination of automated, comprehensive threat management and flexible threat prevention meets the demands of today's organizations for strong, yet manageable application security.

Fast, Invisible Intrusion Prevention Without The Expense

Arxceo's patent-pending technologies, PnPro and Tag-UR-IT, significantly enhance network protection in today's environment. All Arxceo appliances implement these technologies to provide the most robust antireconnaissance technology in the industry—providing anomaly-based intrustion prevention while stopping attackers and worms from probing your network.

Ally ip-100 (100Mbps) - \$895

Plug and Protect (PnPro)

- No TCP/IP or MAC address; cannot be targeted or exploited
- Provides quick deployment; 15-minute installation
- No client impact; no configuration changes to any other devices
 100% compatible with other network bardware and coffware.
- 100% compatible with other network hardware and software

Tagged Universal Resource Information Transmission (Tag-UR-IT)

- Anomaly and behavior-based detection; no signatures needed
- Tags, inspects, and preprocesses packets before forwarding onward; hardens network traffic before it enters your network
- Provides protocol enforcement, antispoofing protection, and antireconnaissance
- Stops Denial of Service attacks (DoS, DDoS, DRDoS, etc.) along with "slow and low" network recons—even preventing bouncescans from succeeding

Britestream Networks & OSST Partner On Scalable Security Appliance

Britestream Networks and Otto Security & Software Technologies (OSST) have partnered to deliver a highly scalable security appliance built on Microsoft Internet Security & Acceleration Server. The New OSST SecureGUARD combines the strengths of Microsoft's ISA

Server 2004 and Britestream's

SecureGUARD

SSL Security NIC to deliver perimeter security, branch-office connectivity, Web caching, and maximum SSL performance in one solution.

The wide range of security appliances fit from low-cost to maximum-performance solutions. The SecureGUARD Series can be adjusted to suit nearly all of your business requirements for content and information security. Simple, fanless, low-noise, and low-cost models for small and midsized businesses up to highly available enterprise solutions with a maximum of performance.

The SecureGUARD appliance product line for Microsoft ISA Server 2004 delivers a combination of perimeter security, branch-office connectivity, and Web caching in easy-to-use appliances at an affordable price.

"We are very excited to enter into this partnership with OSST," says Bob Weinschenk, CEO of Britestream. "Their delivery of a fully integrated security appliance built on Microsoft and Britestream technologies creates a solution that is both highly scalable and easy to deploy."

MetaInfo SAFE DHCP Quarantine Framework Is The Next Step In Network Access Control

MetaInfo's SAFE DHCP DHCP Quarantine Appliance uses MetaInfo's SAFE DHCP Quarantine Framework, an extensible architecture for network access control.

Using the SAFE DHCP Quarantine Appliance and the MAC Address Authentication Module, network users must pass the host integrity scanning and authentication procedures your site requires. A special DNS internal root service, SAFE DNS, resolves all queries not specifically configured to the SAFE DHCP Quarantine Web page.

You control what happens after a user completes and passes the procedures, but users that fail the procedures remain in quarantine and isolated from the rest of your network.

Communications Maintenance & Upkeep

How To Keep Data & Voice Traffic Flowing Flawlessly

by Christian Perry

COMMUNICATIONS equipment forms the lifeblood of the enterprise, but the efficient exchange of voice and data between employees, departments, buildings, and other entities—including customers—can grind to a halt if that equipment isn't working as it should.

But with proper upkeep and maintenance of routers, switches, telecom devices, and other equipment, communication can flow continuously without serious hiccups. A proper maintenance regimen can vary depending on company size, number of devices, and type of devices, but regardless of the environment, it should never be ignored.

When communications equipment isn't properly maintained, companies can encounter downtime caused by bugs or glitches, or worse, they can be forced to deal with equipment that outright fails. When lines of communication evaporate, company processes are broken, which could send customers seeking business elsewhere.

Routers & Switches

According to Runi Ngim, a technical support engineer for Zultys Technologies, preventive maintenance and the process of keeping devices up-to-date are subjective measures. "Some administrators choose not to perform preventative maintenance or schedule routine maintenance until there's a need to upgrade, such as fixing [a] problem they encountered," Ngim says. "Others may choose to perform preventative maintenance periodically—maybe every six to 12 months."

That schedule might vary depending on the age of the equipment, Ngim says, because maintenance or diagnostics on newer equipment might not need to be performed as often as what older equipment requires. Preventive maintenance, which includes hardware diagnostic tests, is performed to prevent unexpected hardware failures that can be difficult to remedy. Ngim says that the availability of hardware diagnostic tools might be limited to a vendor's particular brand, models, or software

version, and companies should check equipment manuals for details on the equipment.

Preventive maintenance also includes implementing software upgrades, which generally requires more regular attention than diagnostics. "Routers and high-grade switches need firmware updates to fix bugs and to add new functionality," says Dale Laushman, founder and CTO of The Uptime Group, an IT and VoIP consultancy. "We determine what patches and feature sets impact our equipment and make a decision on whether or not to upgrade from there, while keeping uptime as high as possible."

Laushman notes that while some installations never require software upgrading, it's nonetheless a good idea to stay on top of the upgrade process. Manufacturers generally release firmware updates at least every six months for new products, but that schedule

Global DataGuard

can trickle down to once per year after products have floated around in the marketplace for a few years.

Routers and switches also require occasional physical maintenance, particularly to ensure their environment is constantly supporting ideal operating conditions. "Our primary concerns are heat and electrical conditioning, ensuring [equipment] is being maintained at a temperate environment and not being subject to extreme temperatures," says Steve McDonald, CIO of OHC, a holding company for Optimus Solutions, Canvas Systems, and Optimus Consulting. "We also keep dust and particle debris to a minimum for the sake of moving parts."

McDonald's company performs quarterly inspections of its routers and related equipment, ensuring that air is passing through equipment as intended. If dust or debris is discovered during an inspection, technicians remove the blockage using a dry dust rag or a small vacuum cleaner.

Telecom Equipment

When it comes to telecom equipment, maintenance depends entirely on the types *Go to Page 12*

Most Important Tip

Thanks to an overwhelming lack of moving parts, communications equipment requires only occasional physical maintenance to keep devices in peak condition. However, that doesn't mean you're otherwise out of the woods because there's another maintenance aspect that can spell disaster if ignored.

"As a preventative measure, it is extremely important to stay current on all software releases or patches, as some bugs may or may not occur on all equipment with the same software releases," says Runi Ngim, technical support engineer, Zultys Technologies.

Lose that important file?

Protect against accidental file deletions with NEW Undelete® 5

Now with version protection for Microsoft® Office files

According to the New York Times, file loss costs businesses an estimated \$13 billion per year. The problem is that the Windows® recycle bin doesn't capture every deleted file, particularly files deleted over the network and older "saved-over" versions of Microsoft Office files. Not even your backup system provides comprehensive real-time protection.

Now you can get complete up-to-the-minute file protection with instant recovery—get new Undelete 5!

- NEW! Version protection allows instant recovery of older versions of Microsoft Word, Excel and PowerPoint® files
- EXCLUSIVE! Recovery of deleted files is easy and instant
- EXCLUSIVE! Undelete 5 captures and protects all deleted files in real time—even files deleted by other systems over the network. No more lengthy backup restores!
- Server and workstation editions available

Spic & Span In The

Data Center

Keeping Your Servers & Equipment Clean

by Chris Jackson

DATA CENTERS are often portrayed by Hollywood as sterile, antiseptic rooms that show nary a speck of dust. Servers are glittering boxes whose shimmering lights evoke a spacecraft headed for the frigid wastes of Mars. Try as they might to ignore it, data center managers and system administrators are well aware of the build up of dirt and grime on their systems. Prudent cleaning of servers, workstations, monitors, and KVMs not only helps these devices look better but also function better.

Cautionary Tales

According to Bill Montgomery of Premier Solutions, roughly 20% of his clients take advantage of his equipment cleaning service as opposed to data center cleaning. Many of his customers like to perform their own cleaning, while some don't have any cleaning done on their systems.

One of the main reasons companies avoid cleaning their systems is fear, says Montgomery. Applications that run in data centers tend to be vital business systems that can't incur any downtime. IT managers fear that either hiring a cleaning service or

performing the cleaning in-house would involve unnecessary risk.

Inappropriate cleaning can cause problems, according to Montgomery. Poorly trained personnel using the wrong techniques and tools can seriously damage a server or workstation or disable a KVM. In Montgomery's experience, there's no serious danger when cleaning is conducted in a deliberate, careful, and uninterrupted manner by trained personnel.

When the opposite occurs, havoc is sure to follow. Horror stories abound of servers that failed after static electricity damaged circuit boards, internal vacuuming loosened internal components, and liquid cleaners damaged keyboards.

Imposing Order

Despite the many risks involved in cleaning data center end nodes, many companies do undertake the task on a regular basis. There are two general reasons for conducting periodic cleaning: keeping the equipment operating properly and instilling a sense of order and cleanliness.

A sociology theory known as the "broken window" syndrome illustrates the value of keeping up the appearance of your data center. When a window in a neighborhood is broken and left unrepaired, it signals a lack of care and respect. Eventually, more broken windows will be left unrepaired,

food debris.

trash will accumulate, and the neighborhood will turn into a slum.

This theory also has its place in the data center. The idea is that if servers are kept clean, keyboards cleared of debris, and monitors wiped of fingerprints and food, IT staff members will take better care of their systems.

Let The Professionals Do It

If you're unsure about your staff's ability to safely conduct periodic cleaning, there are many companies available that can keep your equipment clean. Because companies such as Premier Solutions use trained personnel who perform these tasks on a daily basis, they know how to use the tools and supplies properly.

August 4, 2006

Montgomery recommends that companies perform routine cleaning on a semiannual basis. If your equipment is building up debris despite a semiannual cleaning cycle, you'll want to bring it to the attention of your facilities manager, as well as your IT staff. Proper air filtration in the data center should be limiting the amount of airborne contaminants, and IT personnel should be prohibited from introducing

Cleaning Tools

Proper cleaning requires the appropriate tools and materials. One of the

> um that utilizes a HEPA (high-efficiency particulate air) filter. This helps to prevent the recirculation of dust into your data center environment. According to Premier Solutions, some of the best on the market are those from Nilfisk (www.pa.nilfiskadvance.com). For cleaning wipes, Montgomery believes there's no better source than 3M

most important tools is a vacu-

(www.3m.com). He recommends using a two-wipe system with one wipe holding the cleaning solution, and the second being a microfiber wipe for finishing off the dis-

Cleaning Procedures

Cleaning servers and workstations should be limited to front bezels and rear fan exhausts, Montgomery says. Cleaning these should be done with a vacuum equipped with a soft crevice tool with the vacuum set at a low power setting. The aim is to

Always Up, Always On, Always Alive

Continued from Page 1 Services. Oakes is a power expert who formerly worked for Liebert and before that was one of Compaq's first 100 employees.

Too often grounds carry a current because people reverse neutrals by mistake, he says. But without proper grounding, surge suppressors can fail, and you'll have little or no lightning protection, too. "You need to make sure that your ground is just a ground. If I get more than 5 amps in a ground, I get nervous."

Sage Wisdom

How much time have you spent on your DR (disaster recovery) plan? How much money? What about your redundant systems and generators? They're all needed, but Lee Technologies' Mike Hagan makes an important—and provocative—point about extreme problems.

It's unlikely you'll be hit by a dirty bomb or suffer a power outage that lasts for days. But zinc whiskers, faulty grounds, or flawed cabling are common and can take your data center out just as quickly. Have you given your maintenance plan the same time and money you've spent elsewhere?

Oakes also tells clients to monitor power 24/7. It's expensive, but it gives them real-time views of their problems. If you're on a more stringent budget, you can check your power systems once every six months, using the exams to establish a baseline.

And while you're at it, don't forget to check your generator. All too often it sits and waits for a crisis, only to fail. For maintenance, Oakes reviews a generator's factory specs (such as its worst-case voltage) then tests it at 25%, 50%, 75%, and 100% loads, looking for frequency, voltage, and waveform response. He also runs two- to three-hour tests to ensure the machine can withstand a long outage.

HVAC

Your cooling system is also crucial. For maintenance, Oakes suggests thermal cameras to check for hot spots. Check monthly or after moving racks because rack movement can reroute thermal flows. Cameras for preventive maintenance include Fluke's IR FlexCam family (us.fluke.com), Entherm's IRISYS IRI-1011 Thermal Imager (www.entherm.com), and FLIR Systems' PM Series ThermaCAM (www.flir.com).

Five Quick Tips

Jeff Oakes of Sterling Oakes Services offers these tips for effective power maintenance:

- Make sure all your fans are working properly. Replace them if needed.
- Check and replace the capacitors on your UPS if needed.
- Check for discolored wires or equipment. They're a leading sign of problems.
- Within a device itself, take apart connections and make sure there's nothing growing on them.
- Take a holistic approach: "You need to look at the facility as a whole. You
 need to know what it is that you're trying to protect" and where its critical
 points are, Oakes says.

Processor.com

If you do have a problem or if you think more cooling will help, try a portable cooling unit. According to Clark Michel of Atlas Sales & Rentals, a portable cooling unit "keeps you operational," and depending on the size of your data center, "it cools the whole room for you." Atlas equipment can be used for primary, supplemental, or redundant cooling for short-term, long-term, or maintenance.

Fire Protection

Lance Harry, Fenwal Protection Systems' business development manager and a licensed engineer, splits the maintenance of fire protection systems into three categories. The first is for water-based systems, such as sprinklers. Here maintenance is minor, with valve checks and flow tests at least once per year. (Often those tests are mandated by law.)

If you own a more advanced system, such as one combining air sampling with sprinklers, then maintenance depends largely on the manufacturer's advice. For instance, you'll have to check your system's filters at regular intervals. But Harry says it's the system's circuitry that truly matters. "The electronics are the things you're most interested in," he notes, adding that a system where the alarm can't trigger the sprinklers is dangerous.

If you have a true suppression detection system with water for backup (a system that employs a chemical agent), then maintenance is more involved because there are more components, agents, and piping systems. "We recommend biannual service," says Harry, whose company can perform inspections onsite. Such tests are involved, checking everything from the pressure gauge to the cylinders' control heads.

But one thing that rarely has to be fixed is the chemical agent itself because it can have a long shelf life. FM-200, which Fenwal employs in its systems, rarely needs to be replaced. "The things that become most time-dependent," says Harry, "are mostly the hardware."

Flooring

Lee Technologies' Hagan notes that flooring is a special problem in data center maintenance—not the floor itself, but what's under it. Because the plenum is unseen, it's often forgotten, leaving debris to build up and penetrate your data center from below.

Rich Hill, president of Data Clean, writes in a white paper that one such problem is zinc whiskers, which "could be growing right inside your computer room."

Zinc whiskers are growths that occur on zinc-electroplated products, such as the panels in raised floors. Once a single whisker grows to 500 microns, it can wreak havoc on your servers, causing short-circuits and failures. According to Hill, warning signs include odd, hard-to-explain hardware problems, especially with power systems and disk drives, and problems that get worse when you open a raised floor or move equipment around on top of it.

If you think you have zinc whiskers, call an expert because merely lifting a floor panel to check can send whiskers flying into the air. How you remove them and how often you check for a relapse should be determined by a professional.

Cabling

Whether it's a power supply, a server, or a router, each device in your data center is connected to at least one other. That's a lot of cables to maintain.

Panduit, maker of cable management tools, believes that maintenance is part and parcel of good cable management. Cable managers not only keep things neat but protect wires, too, by guarding against sharp bends that can degrade your investment over time.

But Jay Nakomoto, president and CEO of Cable Masters, notes that well-laid cables rarely cause problems. "There's little or no maintenance," he says. If something does go wrong, then you can rely on the manufacturer's warranty to recoup your investment. An expert will vet the problem and send a report to the manufacturer, which in turn reviews it and certifies the warranty if a defect is to blame.

Most Important Tip

No matter what you do to maintain your data center's infrastructure, do it often. Why? Because maintenance is too often ignored. Once a system is up and running, data center experts move on to the next crisis, forgetting that poor maintenance is second only to human error in causing downtime.

"You've got to maintain [your systems] religiously," says Jeff Oakes of Sterling Oakes Services. "Otherwise, you'll have trouble."

PC Planning

Continued from Page 1 new systems, although he did note that CPU caching is a critical spec. Last, graphics performance is important because of the much higher Vista requirements.

A Few Considerations

"The most critical specification overall is: Will this system run Vista when it starts

Most Critical Specifications

Motherboard: Should support Windows Vista

Graphics: Should support at least DirectX 9 and have 128MB of memory

RAM: At least 512MB, but 1GB of memory is now reasonably priced

Hard disk: At least 7,200rpm speed and 120GB capacity

CPU: Buy the lowest speed in the premium CPU line

Form factor: notebooks for knowledge workers; desktop to save on repairs and maintenance

shipping next year," says Marc Demars, a senior manager for product planning at Gateway. "Small and midsized companies will migrate faster over the next two to three years, so it's important to study the requirements closely. It's also important to consider whether the motherboard will run Vista, whether integrated graphics will suffice, and then look at processor speed and graphics performance."

Microsoft has made the planning process easier by releasing full Vista requirements online at www.microsoft.com/windows vista/getready/capable.mspx. This site makes a few recommendations for processor speed (at least 1GHz), RAM (1GB or more), and graphics (128MB of memory). Roger Kay, president of Endpoint Technologies, a data center consulting group, recommends buying a PC with "the lowest processor in the silicon vendor's premium line, such as the cheapest P4 or Athlon 64."

Kay also recommends looking first at form factor (notebook vs. desktop) as a top priority because it can dictate how the PC is used. "People supplying task workers or who want flexibility to fiddle with their systems or who want the highest performance should choose a desktop. Anyone else should consider a notebook."

Lenovo's Locker concurs, suggesting two main reasons to consider a desktop. A

desktop generally lasts longer due to how a notebook is sometimes mishandled and damaged in the field. Secondly, a desktop costs less to support, due to the ease of repairs and fewer complications with built-in wireless networking and internal battery. "In most cases, if it's a knowledge worker who needs 24/7 usage, or if the PC will be shared among users, then a notebook makes the most sense," he says.

After form factor, Kay lists technical support costs and quality and then system price as top priorities. He suggests determining the required specifications for notebooks and desktops and then calling in bids from at least three vendors. He says the bid process should be short and focused, instead of a lengthy, time-consuming endeavor.

One other critical issue in the buying decision, especially when the goal is to make a system last for three years, is to research where the price break-off point is for various PC parts. For example, 1GB of RAM in a notebook is now reasonably priced compared to last year, but a system equipped with 4GB of RAM is much more expensive. Locker notes that you can usually spot the break-off point quite easily by studying the customization sections of a manufacturer's Web site, looking for price jumps between one level (for example,

Windows Vista Recommended Specifications

- 1GHz 32-bit (x86) or 64-bit (x64) processor
- 1GB of system memory
- A graphics processor that runs Windows Aero
- 128MB of graphics memory
- 40GB of hard drive capacity with 15GB of free space
- DVD-ROM drive (integral or external)
- Audio output capability
- Internet access capability

Source: www.microsoft.com

120GB hard disk) vs. another (250GB hard disk).

Other PC buying variables, such as lease or buy and resale value, depend more on the company cash flow and long-term financial planning. Most companies should look closer at future usage. "Someone who only edits Word documents now could end up making business videos down the road," says Demars.

Communications Maintenance & Upkeep

Continued from Page 9 of equipment used by a company. For example, Laushman says that many multiplexers and other solid-state telecom devices are particularly well-designed and thoroughly tested because the equipment was designed by telecom engineers for phone companies. These devices require very

few firmware updates and need occasional careful removal of dust from their chassis. Proprietary switches and PC-based telephony equipment, on the other hand, require more complex maintenance duties.

"For example, a PC-based IVR [interactive voice response] unit has fans, power supplies, and

Five Quick Tips

Dale Laushman, founder and CTO of The Uptime Group, gives us five of his most essential tips for keeping up and maintaining communications equipment.

- Test all firmware and software updates before scheduling a live update.
- Have spare parts kits for all moving parts and single-path-of-failure parts for each piece of equipment.
- Plan that something will go wrong during each upgrade and that you will be forced to back out to the original state. That way there will be no surprises.
- · Plan maintenance and upgrades during times that are least impacting for your customers.
- Inform the downstream carriers and/or phone company that you work with that you are going to do scheduled maintenance and upgrades before you do them. This makes their jobs easier and keeps them alert for when there really is a problem.

Processor.com

hard drives," Laushman says. "All of these components move, which means they fail far sooner than solid-state equipment. Software monitoring agents that test services and applications, coupled with a rigidly defined schedule of replacement of those components, keeps uptime at a maximum."

According to McDonald, olderstyle PBX systems generally require more upkeep and maintenance than newer systems, primarily because they have more moving parts. McDonald's VoIP systems are much less labor intensive because they fall under the same maintenance guidelines as the networking equipment used by his company. Further, his telephony equipment is colocated with the other electronic equipment, so it shares the same clean and cool environment-both qualities that help cut down on maintenance.

Wireless & Security

Although routers, switches, and telecom equipment compose the bulk of communications upkeep and maintenance, other devices also demand occasional attention. For example, wireless devices, such as access points, and security devices, such as card readers,

should be included as part of a regular routine to ensure they're running at optimal levels.

"Wireless devices may require software upgrades periodically more frequently than established routing and switching equipment, such as [devices] from Cisco," Ngim says. "It's important that the administrator stay up-to-date on any patches or fixes."

As for physical maintenance, McDonald says there are few moving parts in wireless devices, so it's important to simply ensure that the environment in which the equipment resides remains within normal operating temperatures. Otherwise, OHC maintains its wireless equipment using monitoring software. "We don't actively visit or do active inspections [of the wireless devices],

partly because they're all installed in out-of-the-way places," McDonald says.

Software upgrades and monitoring software are also crucial pieces of the maintenance regimen for security devices, with upgrades working to prevent operation failures and other problems, and software working to alert administrators to potential trouble with the equipment. McDonald notes that companies already have a built-in monitoring device that alerts them to maintenance issues with security equipment: people.

"People working in [securityprotected] areas will notify you very quickly if equipment is malfunctioning and they can't access areas they need to access," he says.

your system's fans. Vacuum slowly and methodically, being sure not to insert the tool too deeply into the openings, as you want to avoid damaging any fans. Resist the urge to wipe down your servers and workstations with cleaning cloths. Even with the best wipes, this simply introduces more dust into the air, which invariably gets drawn into your server's air intakes.

Cleaning displays should be done as a two-step procedure: Wipe down the CRT or LCD with a wet cloth and then dry with

Most Important Tip

Many well-intentioned IT managers should take to heart the phrase that is commonly believed to be part of the medical profession's Hippocratic Oath: First, do no harm. Although the inside of a server can appear dirty to the inexperienced eye, it's unnecessary to vacuum the interior of a server or workstation, according to Bill Montgomery of Premier Solutions.

Vacuuming the interior of a computer will remove this dust and debris, but the chance of damaging the computer with static electricity, a banged component, or other accident far outweighs the benefits gained. Instead, focus on the tasks that have the highest risk-to-reward ratio. Carefully vacuuming the external openings clearly delivers the greatest bang for the buck.

an accompanying dry wipe. Care should be taken not to exert too much pressure on an LCD screen, as it may crack.

Keyboards usually suffer from debris that has become embedded between the keys, as well as dirt buildup on the keys themselves. Vacuuming the keyboard should remove most of the dust and debris, while using the same cleaning procedure as described for displays should help remove dirt buildup on the keys. These procedures also apply to console devices, storage arrays, switches, and other end node equipment.

No Scrubbing Bubbles

Keeping your data center equipment clean is an often overlooked, yet important, task. Clean equipment will operate more efficiently, use less energy, and last longer. Cleaning the end node components of your system isn't an onerous task, just one that requires a suitable level of caution, the appropriate tools, and a modicum of common sense.

Sage Wisdom

When cleaning your servers and other network devices, dust is one of the most detrimental contaminants. Dust clogs air intakes, blocks fan exhausts, and raises internal temperatures if allowed to collect unabated. Periodic cleaning will reduce this to an acceptable level in most data centers; if dust still persists, inform your data center manager that the amount of airborne contaminants is too high.

IT personnel should also be aware of introducing dust as well as other debris into the data center. Unpacking servers and other equipment can introduce dust from cardboard boxes, and Styrofoam from packing materials have a habit of breaking into small, easily spread clumps. Needless to say, IT personnel should never bring food or beverages into the data center.

TemPageR[™]... The Computer Room Temperature Monitor

Protect Valuable Equipment & Reduce Downtime By Monitoring Temperatures In Rack Cabinets, Computer Rooms & Data Centers

\$295 List... *On Sale For \$245* Rack Model On Sale For Just \$275

- · Arrives assembled & ready to install in minutes
- Allows real-time temperature monitoring & logging
- Includes 1 built-in & 1 external digital temperature sensor
- Allows 2 additional external digital temperature sensors
- External temperature sensors can be up to 100' from box
- Includes PageR Enterprise for expanded monitoring
- · Allows actual temperature values in alert messages
- · Allows notification to individuals and groups
- · Allows notification by email, SMS, SNMP & more
- · Connects via Ethernet for easy & immediate use
- · Allows management through a web browser
- Requires NO host PC, additional software use is optional
- Includes TemPageR box, 10' Ethernet cable, CD, manuals
- 'Universal' Power Adapter, RoHS, works worldwide
- Includes Toll Free sales & technical assistance
- Includes 1 year 'Maintenance Support & Update Service'
- · Includes a '30-Day Satisfaction Guarantee'
- · Incorporates AVTECH's almost 20 years of experience

Save \$\$... Order TemPageR Today!

No one knows when or how disaster will strike. We just know the potential is always there. An early warning is critical to minimize the impact on computers, networks, users & the organization. When disaster occurs, there are significant costs in areas that go far beyond the simple replacement of damaged hardware. This is because what happens in your data center affects the entire organization and maybe even your customers.

Temperature monitoring is one of the biggest threats facing today's dense computer rooms and data centers. More and more hardware is placed in each rack and rooms that were never designed to house computers are often converted to IT data centers. Air conditioners are typically undersized, poorly placed, not maintained and run continuously until they die. When aircon units fail, critical servers continue to operate and crank out heat while cooling systems remain disabled. Oops!

Computer and network equipment is designed to operate within a very specific range of temperatures. Basically, if your data center rises above 85° F, you're cooking your hardware and increasing the risk of failure. Unsure... just ask IBM, HP, Dell, Liebert or APC. The bottom line is that you need to know immediately when temperature issues arise because recovery is simply too expensive.

"25% of all data centers experience downtime more than 5 times a year... 60% of these last more than a half day."

Thankfully there's TemPageR, the low price, high value solution that monitors 24x7 to automatically alert your staff when temperature extremes or changes occur. It will log temperatures for easy export, runs without a host PC and easily integrates with advanced monitoring software like PageR Enterprise, OpenView, Tivoli & Unicenter. **TemPageR** is proven protection used by Fortune 1000, Pentagon, United Nations, NASA, U.S. government and businesses large & small... Why not at your facility?

AVTECH Software has almost 20 years of experience serving data centers around the world. Our TemPageR product provides reliable, 'real-time' digital temperature monitoring with advanced features. Easy to install and configure, your staff can have TemPageR operational in minutes to protect your equipment and data center. If you're looking to monitor more than temperature, then consider one of our powerful **Room** *Alert* models to monitor temperature, humidity, power, flood, smoke, entry, and more. Our alerting and automatic corrective action capabilities are the most advanced available.

"Immediate detection & alert notification are the #1 ways to reduce downtime costs."

To learn more about **TemPageR** or **Room** *Alert*, visit us online or call to speak with a product specialist. We're happy to send you printed literature, quotes, evaluation CD's and more. You can request product quotes online for immediate delivery by email. AVTECH Software products ship complete with everything you need and include printed documentation, toll free technical support and a '30-Day Satisfaction Guarantee' return policy.

Linktropy™ 4500 WAN Emulator From Apposite™ Technologies

Prices Start at \$2500

Simulates Link Conditions:

- Bandwidth
- Latency
- Packet Loss
- Bit Errors

Emulates Any Type of WAN:

- Terrestrial
- Wireless
- Internet
- Satellite

The Linktropy 4500 from Apposite Technologies is a new generation of WAN emulator, combining unsurpassed precision with unbeatable prices. The Linktropy 4500 simulates WAN bandwidth, delay, congestion, bit errors, and other important link characteristics at speeds up to 155Mbps.

The Linktropy 4500 is used to test, benchmark, and troubleshoot networks and applications under a spectrum of real-world WAN conditions. Uses for the Linktropy 4500 include:

- Networking application performance testing
- Customer and trade show demonstrations
- WAN acceleration product benchmarking
- Satellite and wireless network developmentWAN bandwidth requirement studies
- Network specification
- Application turning
- Network design validation
- VoIP quality testing
- TV/IP and IP video testing
- · Web site responsiveness testing
- Product QA testing

The Linktropy 4500 is designed for ease of use. The Linktropy traffic monitor displays throughput graphs and statistics to help visualize performance. Integrated Ethernet bridging and IP routing functionality make the Linktropy 4500 simple to install in any network while the intuitive, Web-based, graphical interface allows the Linktropy 4500 to be set up and configured in minutes.

SafeWord SecureWire Identity & Access Management Appliance

Secure Computing's SafeWord® SecureWire™ is designed to simplify access to applications, data, and network resources without compromising security by hosting and managing all external access methods on a single appliance: VPNs, Citrix applications, extranets, Web mail, and much more. SecureWire can also host and manage all internal access methods: LAN connections, wireless LANs, and even

mainframes. By having one comprehensive appliance to control your access methods, both inside and outside of your network, administrative and maintenance costs can be greatly reduced.

A key component of managing identity is authenticating users. SafeWord® industry-leading strong authentication comes standard with every SecureWire appliance to deliver proof-positive identity of all users. SafeWord strengthens network connectivity with strong, one-time password user authentication included in the base product. SecureWire also provides native support for Active Directory, LDAP, and RADIUS while supporting a wide range of authenticators, including smart cards, biometric devices, and a range of third-party tokens.

With tight integration to Active Directory, SecureWire is ideal for the growing number of organizations that manage IT in a Microsoft environment. Companies can easily manage user identities by leveraging their existing Microsoft tools and applications.

SecureWire can simplify access, management, and compliance for any organization, from branch offices to large enterprises. Any organization that extends its information assets to internal and external users can benefit from SecureWire.

- Simplifies network access and secures every access point
- Simplifies access management by consolidating policies on a single device
- Enables configuration compliance to ensure that only properly configured end-point devices can access the network
- Reduces IT workload by providing a single point of management and reporting

SecureWire is immediately available though Secure Computing partners For More Information visit us at: www.Processor.com/Secure or call us 800.692.5625

ZyXEL's New VoIP Solutions Bridge the Move to VoIP for the SME

Cost savings and improved productivity through digital convergence are some of the

key elements driving businesses to change from a traditional phone network to a VoIP network. There's no denying it; the advantages are clear, and the demand for VoIP networking solutions is on the rise.

ZyXEL's new SMB VoIP Integrated Access Device (P-2608HWL) and SMB VoIP router (P-2304R) can bridge the move to VoIP for growing businesses. Both products enable multiline VoIP service through one of two options:

- · Hosted VoIP services
- Integrating with an existing analog PBX system

Both of these options provide easy deployments for service providers, preventing businesses from having to replace current analog phones, and leverage existing infrastructure.

- 8 FXS Phone Ports (to connect up to eight analog phones)
- ADSL 2/2+ modem
- 4-port Ethernet switch, built-in router
- 802.11g wireless access point
- Multimedia Bandwidth
 Management guaranteeing
 QoS
- Built-in ICSA-certified firewall for security
- Lifeline support

- 4 FXS phone port connections
- 1 10/100M auto MDI/MDIX Ethernet port
- Multimedia Bandwidth Management guaranteeing QoS
- Built-in ICSA-certified firewall/ VPN for security

Please call 1.800.255.4101 for pricing

2U Mount for VESA mount Monitors and Keyboards

- Mounts 100mm and 75mm VESA mountable monitors.
 20.1" monitors and smaller fit into 2U of rack space.
 - Various keyboard/mouse/trackball combinations.
 - Available with or without monitor and keyboard.
 Long life torque binges hold monitor in position.
 - Long life torque hinges hold monitor in position.
 Optional mouse shelf mounts on either side.
 - Complete with lock-out ball bearing slides.

We manufacture many other rack mount and VESA mount products.

Let us provide a custom application for you.

A Window into Wireless Networks

Wi-Net Window gives you a clear picture

To install, expand or operate a wireless network you need to be able to see critical information about where the best location is for components, what access should be allowed and where or what security is in place. The new handheld Test-Um Wi-Net Window Analyzer gives you all the critical information you require and more! Take a look at all of its advanced features:

- Full alpha/numeric LCD display shows all information clearly and completely
- Picks up IEEE802.11 wireless signal types b and g
- Signal strength shown as a lighted bar and as a percentage for clarity
- Shows component name and channel of transmission
- Lists and logs all received wireless transmissions in the area for inspection with constant scanning
- Audible network pick-up signal
- Displays encryption condition on each wireless component

- Lists each signal as either an access point, an ad-hoc or Twin network type
- Ping function accesses IP addresses and determines an internet link condition
- Negotiates with network DHCP for component ID
- Shows router, DNS and target information
- Auto-off
- · Lightweight: less than 8 ounces with batteries installed

Where To Buy

DHAGICVI

Cabling

■ Pulizzi Engineering has released a new line of power cables and accessories that are available in various plug types (straight blade or twist lock connectors) and lengths (from 8 to 15 feet) at prices ranging from \$8 to \$100. Among the 30 stock set versions available are NEMA 5-15P to IEC C19, NEMA L6-20P to IEC C19, and European Schuko to IEC C19. Standard configurations range in specifications ranging from 120 to 230 volts in 15- and 20amp current ratings. Additionally, Pulizzi has C13 to C14 jumper cables available in 2- to 12-inch lengths and a new cable accessory strain-retaining clamp for the IEC 60950-type C20 power inlet. The new clamp uses standard cable ties, replacing an older metal clamp method.

Content Networking

■ Kemp Technologies has launched the LoadMaster LM-2500 balancing appliance with Layer 7 content switching and 1,000 TPS SSL acceleration. The new appliance provides throughput of more than 350Mbps

and supports up to 50,000 concurrent Layer 7 sessions and 1 million Layer 4 sessions. The LM-2500 also supports up to 256 virtual and 1,000 real servers. The LM-2500 has a \$5,990 MSRP but is available for an introductory price of \$4,490 through the end of this month.

Router

- Asante Networks unveiled the FriendlyNET FR204 Series of Internet routers for small businesses. The FR204's routing engine is based on a custom systemon-a-chip to improve throughput, and the routers are designed with a natural firewall that shows only the IP network address of the router. The Secure Packet Inspection feature filters both incoming and outgoing data packets running through the router. The FriendlyNET FR204 has four 10/100 LAN ports, wireless access point (FR204G), and a high-speed 10/100 Internet port. No drivers or specialized startup utilities are required. The router's wireless access point is 802.11b/gcompliant and evaluates the best signal path for transmitting and receiving data.
- Force10's TeraScale E-Series switch/ routers, which feature 10Gb Ethernet architecture, now have integrated SONET/ SDH (POS) technology. Service providers

who use the Force10 four-port multirate line card can choose from OC-3c/STM-1c, OC-12c/STM-4c, or OC-48c/STM-16c speeds per port. The four-port OC-3c/OC-12c/OC-48c card will be available for \$100,000.

Security

■ D-Link's new SECURESPOT sits between your computer and your broadband connection and is able to protect connected systems from viruses, worms, Trojans, and even pop-up ads. The SECURESPOT can connect between the broadband modem and a single computer system or between a broadband modem and a router. When connected to a router, the SECURESPOT can protect up to four computer systems. In addition to protecting systems from viruses, SECURESPOT can also block unwanted content from Web sites, known and unknown email senders, specific peer-topeer applications, and specific IM applications. The SECURESPOT is compatible with Windows 98 and newer, as well as Mac OS X 10.3 and 10.4. The SECURESPOT costs \$99.99 and comes with a one-year license for four computers. Extending the license will cost \$79.99. Additional computers cost \$19.99 a year.

■ eIQnetworks unveiled the latest version of its Enterprise Security Analyzer, designed to satisfy the security intelligence and compliance requirements of MSSP, government, and enterprise customers. ESA 2.5 is capable of processing 15,000 EPS (events per second) on a single server, letting users preemptively reduce security breaches and limit system downtime. The new version supports Oracle and MS-SQL event management and delivers user-definable event and threat-level classifications, over 100 new real-time reports, event/alert playback, and comprehensive regulatory compliance. The ESA 2.5 starts at \$7,995 for five devices and five hosts or \$25,000 for up to 50 nodes.

■ The FirePass 1200 is a new SSL VPN appliance from **F5 Networks**. It's aimed at branch offices and SMEs and licensable for 10 to 100 users, who can all enjoy concurrent access. F5's Visual Policy Editor headlines the list of the FirePass 1200's features. The platform supports all SSL VPN access modes, as well as apps such as iNotes, OWA, Windows Files, and Terminal Services.

Data Protection Priority

Iron Mountain's Suite Secures Your Information

by Cynthia Lazzaro

BACKING UP AND restoring data efficiently, accurately, and securely is the bane of many IT managers at small to midsized enterprises. Many of these SMEs lack the manpower or financial resources to invest in high-capacity external storage products yet face the same compliance regulations larger companies do.

Iron Mountain's PC Data Protection Suite is a combination of Iron Mountain's Connected Backup/PC data protection and DataDefense. Connected Backup/PC provides automatic backup,

encryption for sensitive data, and quick restore to any PC anywhere. DataDefense intelligently encrypts data, monitors for security threats, and can automatically destroy data on a lost or stolen computer based on the number of times an incorrect

SNAPSHOT

Iron Mountain PC Data Protection Suite

Provides a one-stop shop for secure remote offsite backup, compliance management, and rapid remote recovery

www.Processor.com/IronMountain

password is entered or if the device hasn't connected to the network for a period of time. As an alternative the device can be disabled to prevent access and protect sensitive corporate data.

The integration of these two products creates the Data Protection Suite, which provides enterprise-level control over the PC data protection and recovery process, including providing complete endpoint security.

The PC Data Protection Suite is administered in-house at Iron Mountain, protecting a company's assets both inside and outside the corporate firewall. The Data Protection Suite provides fully automated data protection without impacting daily business activities, requires no special training,

and is virtually transparent to end users, thus limiting the amount of time the IT staff spends managing data backup and compliance requirements.

In terms of endpoint security, DataDefender version 2 brings to the suite the ability to provide certificate management and support for multiple users of a single PC providing security yet flexibility. The Connected Backup part of the suite provides security using the highest levels of digital backup

Availl (www.availl.com) provides continuous backup and delivers real-time continuous data protection and server mirroring. According to its Web site, Availl backs up any number of remote servers to one or more of a company's centrally located systems. However, a small agent must be deployed on existing source servers and backup systems, so in this case the company must provide its own storage. Iron Mountain provides offsite storage as part of the package.

The PC Data Protection Suite is administered in-house at Iron Mountain, protecting a company's assets both inside and outside the corporate firewall.

security available, including 128-bit AES, which is used for data transmission to the data center, data storage, and when necessary, data recovery.

A number of companies offer similar capabilities. For instance,

A closer competitor would be IBM's Global Services Online Backup for Distributed Servers (www.ibm.com), which also provides offsite data protection, Web-based management, and 24/7 monitoring.

Continued from Page 16

- GTA has introduced the GB-3000 Gigabit Firewall Appliance for SMEs. The appliance is designed to provide security for gigabit networks and supports as many as 12 network interfaces. Of those 12 interfaces, 10 can operate at up to 1Gbps. The appliance comes in a 2U rackmount enclosure with a 3.2GHz processor, dual redundant power supplies, two 10/100 Ethernet interfaces, and two 1000/100/10 TX gigabit Ethernet interfaces. Mini-GBIC expansion is offered, which provides additional configurations for most fiber gigabit form factors. The GB-3000 includes Mail Sentinel Anti-Spam and Mail Sentinel Anti-Virus email filtering, both of which are subscription-based.
- Zeus Technology and AEP Networks have announced a partnership in which AEP Networks will integrate Zeus' ZXTM (Zeus Extensible Traffic Manager) software into AEP's NSP (Netilla Security Platform) appliances and application-layer security gateways. The move aims to provide customers with extended and better scalability to expand remote access to more than 10,000 concurrent users. In addition, Zeus' software provides system reliability and fault tolerance functions. Products from AEP Networks containing Zeus' technology are expected in Q4 through AEP's global channel.

Serial Networking

- B&B Electronics announced two new Ethernet-to-Modbus interpreters designed to connect Ethernet TCP/IP networks to Modbus ASCII/RTU serial devices. Both interpreters come in a compact form factor, measuring 1.25 x 4.5 x 4.75 inches (HxWxD). The units feature a quick-start guide and a step-by-step wizard to ease installation and configuration. The MES1A works with Modbus devices with RS-232 interfaces and the MES1B supports RS-422 four-wire point-to-point interfaces or RS-485 four- or two-wire multidrop bus connections. Both units are available for less than \$300 each.
- DCB has released an MPC (multiport controller) that connects to a host computer and multiplexes messages from peripheral devices. The unit can transmit data to individual devices while receiving data from all device ports at once. Users can individually configure ports for word length, speed, parity, and stop bits via menu commands from the NMP (Network Management Port). Additionally, users can select a message terminate character, a host control character, and XON/XOFF flow control settings. DCB compares the MPC's functionality to the BayTech 528AC11P controller but with additional

management features. Prices start at \$1,195 for the 8-port MPC-08 model to \$4,695 for the 32-port MPC-32 unit. Rackmounts start at \$49 for 8- and 16- port units and \$59 for 24- and 32-port units.

Storage Networking

■ Crossroads Systems added to its NearEdge SAN connectivity family with the 4GB FC NearEdge 7120-b Bridge and the 4GB FC NearEdge 7120 Router. The devices provide conversion from SAN to tape and disk storage. The devices let 4GB Fibre Channel SANs accept SCSI devices. The company also offers the 6000-b NearEdge Fibre Channel storage bridge, as well as the NearEdge 6000 and 6240 storage routers. A resource sharing feature lets users configure and manage up to eight device maps without rebooting. The routers include CVM (Crossroads Visual Manager), which is the Web-based management tool that handles configuration of storage routers.

Telephony

■ SMC is shipping one of the first Wi-Fi phones certified for use with Skype. The new WSKP100 (\$199.99) provides a way to place cheap or free calls while away from a PC. Unsecured and free WLANs that don't require 802.11 browser authentication are also fair game for a signal. The phone's battery provides three hours talk

and 30 hours standby, and it can recharge via USB connection.

END NODES

Printer

- Hitachi announced a new line of products within its PX Series line of small-character inkjet printers. The new line meets the European RoHS Directive by eliminating lead, mercury, cadmium, hexavalent chromium, PBBs, and PBDEs. The PX Series printers have a 10.4-inch color LCD touchscreen, and the new printers' screens are also 25% brighter than previous models. The printers also provide 10 times more contrast with a viewing angle of greater than 50%. The printers' nozzles and gutters are automatically cleaned before shutdown so that the printers are ready to use on startup. The new printers have an IP55-rated stainless steel enclosure to protect it from elements such as dust and water. An IJP-RST1 option is available to provide Ethernet connectivity.
- Lanier released three new digital MFPs targeted at customers that want to boost productivity and security in departments. The Lanier LD255, LD265, and LD275 offer 1,200dpi, dual-sided scanning at 75ppm, and digital copies/network prints at up to 55, 65, or 75ppm (respectively). The Go to Page 18

Three-Phase UPS Protection

Staco FirstLine Handles Mission-Critical Systems

by Joe Lazzaro

If YOU MANAGE A network or data center, guarding against electrical disruptions that may damage your valuable infrastructure is critical. Computers and servers depend on a stable source of electrical power. Defined, uninterruptible power supplies are essentially batteries that sit between your computer and the electrical outlet, shielding against service outages, spikes, sags, surges, and brownouts, preventing loss of data or damage to

valuable equipment. Smart organizations are depending on UPSes to safeguard critical systems, letting IT staff power down gracefully or

switch to alternate power during an outage or incident.

Staco Energy Products' new FirstLine three-phase UPS units are designed for applications in data centers, broadcast, computer networks, robotics, medical, process industries, wastewater treatment,

Staco's FirstLine unit provides computer grade power quality, a small footprint, low weight, and a standard battery run-time of more than eight minutes.

food processing, and manufacturing plants. The units can provide 10, 15, and 20kVA (kilovoltamps). According to the company, the FirstLine unit provides computer grade power quality, a small footprint, low weight, and a standard battery run-time of more than eight minutes, with optional batteries for virtually unlimited run time. Staco is planning to offer a sidecar for holding additional external batteries, and the company says this will be about half the size of the base cabinet housing the UPS.

Pricing for the FirstLine product line ranges from approximately \$16,000 to \$21,000. The least expensive system is a 10kVA Standard unit, which requires a 208/120V input and output, and has a 20-minute internal backup time at 100% load. The most expensive unit offers 20kVA with a K20 rated isolation transformer. It is a 220/127 input and output, providing eight minutes of internal backup time at 100% load.

According to Kim White, Staco Energy Products marketing

SNAPSHOT

Staco Energy Products FirstLine

Starts at \$16,000

Provides power ranges of 10, 15, and 20 kilovolt-amps and virtually unlimited run times with user-replaceable batteries

www.Processor.com/Staco2

manager, "Another very attractive feature of the FirstLine UPS is that we have decided to offer a three-year warranty on all the electronics. This is exceptional for the industry, but we are so confident about the FirstLine product that we're willing to back it fully for three years."

According to the company, the major competition for the Staco FirstLine UPS product line comes from MGE's Galaxy 3000 (www.mgeups.com), Chloride's Synthesis Twin (www.chloride power.com), Tripp Lite's Smart-Online 3 Phase System (www.tripplite.com), as well as the 4200 FA Series from Toshiba (www.toshiba.com).

Falcon® 4400 Series Windows®-Based Mobile Computers

The Falcon 4400 Series is an ergonomic mobile computer designed for use throughout the supply chain. User-friendly keypads, an audible beeper, and maximized color display complement industry-leading durability.

Technology Features Include:

- Windows® CE or Windows Mobile® operating systems
- 802.11b or 802.11g wireless data communications
- An Intel XScale microprocessor
 Standard, long, and advanced long range engines
- Linear and 2D imager options tailor fit the Falcon 4400 Series to the application

The Falcon Desktop and Management Utilities make the Falcon 4400 Series effortless to deploy and manage. Creative developers can leverage application development tools to further customize units for specific applications.

Three service programs, ranging from a five-business-day repair to an overnight replacement, keep your systems at peak working condition and productivity high. PSC's consulting services are available to help architect, integrate, deploy, and manage mobile wireless systems into your environment, on-time and within budget. Deployment project managers lead the wireless network design, site surveys, staging, image loading, cabling, and installation activities.

PSC Inc. is a global provider of automatic data-capture products and services. Wired or wireless, PSC offers a broad array of products and services for multiple industries, including retail, industrial, manufacturing, distribution, transportation, and logistics sectors.

Performance Technologies CompactPCI

Performance Technologies' offers the world's first CPmpactPCI 2.16 computer blade based on 64-bit single- and dual-core AMD Opteron processors. Designed to run Linux, Solaris, and Windows operating systems, it is an ideal computer for high-end packet processing or multithreaded software applications found in wireless, softswitch, defense, and other computer-intensive applications

The CPC5564 is designed for use with Performance Technologies' complete line of Advanced Managed Platform products. The Advanced Managed Platform is the basis of a family of application-ready, fully managed platforms, allowing system designers to build NEBS-compliant, highly reliable solutions that combine state-of-the-art switching, system management, and a full line of slot components and software.

Volume Pricing starts at \$2,995.

Product Releases

Continued from Page 17

systems were designed for ease of use and included such features as easy-to-read font sizes. The LCD touch screen also offers a Simplified Display feature that displays only common options. The devices also include Copy Guard protection, which creates special original documents that, when copied on another Copy Guard device, create unreadable copies. The devices also have scan-to-email, scan-to-folder, and scan-to-FTP features. Customers can also purchase 3,000-sheet finishers that offer 50- or 100-sheet stapling or a saddle stitch finish (which creates books up to 60 pages). Other options include a GBC Streampunch module that handles WireBind and plastic coil finishing or an interposer that adds full-color covers.

Lanier also released two other MFPs: the LD425c and the LD430c, which offer 25 and 30 copies per minute, respectively. The MFPs offer color, monochrome, and mixed copies without reducing output speed. They can print with an equivalent of up to 2,400 x 600dpi and support up to 120-pound index stock. The bypass accepts up to 140-pound index stock, as well as 12- x 18-inch paper. They can scan to URL, folder, FTP, or email and support encrypted PDF transmission. Customers can purchase finishing options such as a 500- or 1,000-sheet finisher that includes a stapling feature.

Server

server with a 64-core speed and performance of 4 million transactions per minute. IBM has also added IBM Tivoli UAM (Usage and Accounting Manager) for IT departments and outsourcing companies to monitor and bill usage of server resources. IBM has included Virtualization Engine technology for support of up to 10 virtual servers or partitions per processor core. Other features of the new server include Dual Stress Technology, Tivoli Access Manager for Operating Systems, and IBM Server Consolidation Factory for System p5.

Storage

- Addonics' new Cipher UDD is an external reader/writer that encrypts data in hardware and requires the insertion of an included dongle to access the data. The device connects via eSATA or USB 2.0 and natively reads/writes PCMCIA hard drives and ATA Flash cards. Better still, when used with common adapters, the device can encrypt CompactFlash, Secure Digital, and most other flash memory card formats, plus the Micro Drive. Prices start at \$79 for a Cipher UDD with 64-bit encryption. 128-bit models and bundled adapters are available, too.
- Corsair's Flash Readout USB drive is a typical USB drive with a unique extra: a BCD (bi-stable cholesteric display) on the drive. The display contains an 11-character user-definable label, a pie chart showing used and free space, and the amount of free space available. The new Flash Readout USB drive comes in 1GB and 2GB capacities and includes read speeds of 20MBps and write speeds of up to 7MBps. The flash drive doesn't require any additional drivers when used with WinMe/2000/XP, Linux kernel 2.4 and later, and Mac OS 9/10 and later
- DPS-Arco released the eSATA RAID+, a continuous backup device targeted toward the audiovisual, graphic design, and broadcasting markets. Connecting two SATA drives to a system via eSATA, the device uses RAID 1 to back data up to both drives on the fly. This facilitates easy recovery should any drive fail. In addition, one drive can be removed for offsite storage or distribution to a project partner. The eSATA RAID+ operates independently of the OS, so compatibility is broad.
- Emulex has announced that it now offers 4Gbps HBAs for Intel's Storage System SSR212PP, which is based on EMC AX150 technology. The new products are the LightPulse 4Gbps LPe1150-E

Full Throttle Mobility

Sybase Brings It All Together

by Sandra Kay Miller

IT DEPARTMENTS HAVE been cobbling together mobile technologies, adding each new one to the pile as they emerge. As a result, interoperability, security, and management issues abound, causing enterprises to look for solutions to bring their individual point solutions under centralized control.

Despite the drive for mobility in the enterprise, companies continue to be cautious in their decision to mobilize business-critical processes and applications onto PDAs and smartphones. However, global enterprise software company Sybase has listened to these concerns, leading it to develop an integrated approach to the often-heterogeneous environment of corporate mobile computing.

To tackle this shortcoming, Sybase launched the Information Anywhere Suite.

Composed of over a dozen different modules covering messaging, device management, security, and application enablement, organizations can now amalgamate their mobile infrastructure under a single secure, scalable mobile software platform.

"Mobile enterprise deployments are evolving from single applications such as email or field services into a strategic part of the core IT backbone," says Terry Stepien, Sybase iAnywhere president.

The four key capabilities of the Information Anywhere Suite address this shift toward weaving mobility into the business

SNAPSHOT

Sybase Information Anywhere Suite

Starts at \$100 per seat

A scalable, secure mobile software platform integrating email/messaging, mobile device management, enterprise-to-edge security, and back-office application extension capabilities

www.Processor.com/iAnywhere5

and the 2Gbps LP101-E HBAs. The HBAs support up to 12 SATA II drives in a 2U rack-mountable enclosure and up to 6TB in a single array. The products are available in both a single- and dual-controller configuration. The LP101-E is a low-profile PCI card that is compatible with either a standard-height or low-profile server slot. The LPe1150-E is a single-channel PCI Express card for SAN environments.

■ Mellanox Technologies announced that Sun Microsystems' Sun Blade 8000 Modular System features Mellanox's 4X InfiniBand Host Channel Adapter. The dual-port HCA is based on the PCI SIG ExpressModule specification and provides dedicated cooling and a single-bulk power supply, making it ideal for server-to-server and server-to-storage applications. The unit also features tool-less installation, hot-plug capabilities, and 10Gbps performance.

■ SmartDisk released a new portable hard drive that has an LCD. The FireLite XPress is available in 60GB and 120GB versions and supports Mac OS 9/X and WinMe/XP without drivers. The drives include BounceBack Express backup software and each drive's LCD can display information about the drive's contents, including the date that data is recorded (and the amount of free space remaining on the drive). The SmartDisk FireLite Xpress 60GB version is available for \$199.99 and the 120GB version is available for \$299.99.

SOFTWARE

Business Productivity

■ Configuresoft boosted its ECM (Enterprise Configuration Manager) with a new module: ECMMX For Assets (ECM Management Extensions For Assets). The software uses wizards to add attributes to hardware and software assets. It tags both assets it discovers and assets that it cannot discover, such as fax

machines. It customizes the ECM data repository to the customer's asset management needs. The new module lets it audit security policy adherence, receive alerts about hardware maintenance, and verify software installations.

Graphic Design

■ Extensis released an update to its Portfolio DAM (Digital Asset Management) software, which is directed primarily at marketing and creative workgroups. The software, now at version 8.1, offers up organizational, viewing, routing, archiving, and distribution tools. This Universal Application, Mac-only 8.1 update adds native support for Intel-based Mac systems, and it supports single, Client, Server, NetPublish, NetPublish for Server, SQL-Connect, and Browser versions of Portfolio. The update is available via a free download from Extensis' Web site for registered Portfolio 8 users. The desktop version of Portfolio 8.1 for single users sells for about \$200. Pricing information for client/server versions of the program is available at Extensis' Web site.

Messaging & Groupware

- Microsoft introduced the second beta version of its Exchange Server 2007 and the first beta release of its Forefront Security for Exchange Server software. Exchange Server 2007 beta 2 features builtin email reliability protections, messaging environment management tools, new mobility features, and unified messaging capabilities. The Forefront Security for Exchange Server beta features coordinated scanning across edge, hub, and mail servers; centralized management of remote installation, engine and signature updating, and reporting and alerts; and it is capable of using up to five antivirus engines to secure all infrastructure layers. The new beta applications are freely available to the public for download.
- TRENDnet has formed a partnership with Skylook. The partnership will see *Go to Page 20*

fabric instead of a bolt-on tool when new technologies emerge.

Supporting major groupware platforms (Microsoft, IBM, and Novell), the Information Anywhere Suite leverages existing installations through its OneBridge technology to provide delivery of email, calendar, contacts, and task applications to virtually any mobile device through a variety of connections, both wired and wireless.

But companies just don't want to mobilize their off-the-shelf systems, they want integration with their enterprise applications, including sales, CRM, ERP, and supply chain databases. Sybase provides the ability to create customized mobile solutions tying into existing data structures and applications such as SAP, Business Objects, and BMC Remedy.

Today's highly mobile enterprise can have thousands of disparate devices scattered throughout the world at any given moment. Through Sybase's Afaria technology, tracking and supporting a mobile workforce of this magnitude is easier thanks to a centralized management console that allows IT to channel system control, user support, policy enforcement, and data flow between headquarters and road warriors.

Clinching the deal for the Sybase suite is the delivery of integrated security. Risks associated with portable devices have long been the big holdup for mobilization in the enterprise. Companies, especially those bound by regulatory compliance, weighing the risks against the benefits, have forgone wireless deployments when faced with the "Mobile enterprise deployments are evolving from single applications such as email or field services into a strategic part of the core IT backbone."

- Sybase's Terry Stepien

complex task of mobile security. Administrators can centrally manage and enforce security through Afaria, as well as through managed security features.

Similar products, such as the Intellisync Mobile Suite (www.intellisync.com), hit the main bases for heterogeneous mobile email delivery, mobile device management, mobile device security, and mobile enterprise application enablement, but Sybase takes enterprise mobility several steps further with specialized modules such as those for RFID, sales, and pharmaceuticals.

For organizations that have been hesitant to mobilize their enterprise, the Sybase Information Anywhere Suite covers all the bases.

True Workstation Replacement Notebook

The Eurocom M590 Emperor introduces the industry to many firsts (19-inch LCD, SLI, and Turion 64) in the notebook market. The primary purpose in its creation was to create a true Workstation Replacement Notebook that could incorporate the largest screen and video power in a single portable solution.

Featuring the largest, most spectacular 19-inch Widescreen WSXGA+ 1680 x 1050 pixels resolution display with a 16:9 aspect ratio ever to grace a portable, engineered into the most luxurious, powerful, and ultra-desirable fully featured 64-bit EUROCOM Supernotebook ever built. World's First notebook powered by NVIDIA nForce4 chipset and by the fastest 64bit Mobile Turion64 processor; featuring NVIDIA's revolutionary SLI Video Technology with two NVIDIA GeForce Go7800GTX GPUs equipped with 256MB of superfast GDDR3. The best high-end professional fully upgradeable Supernotebook is coming to the market. The 290-nits brightness ensures that even in direct sunlight you can see the display clearly.

Engineered for Power, Upgradeability, Ease of Use, Serviceability, Stability,

and Style! From Workstations to Thin and Light Notebooks, Eurocom has everything you need to replace your desktop. Choose your computer model, processor, memory, hard drive, optical drives, operating system, and accessories.

Stratus ftServer W Series 5700 System

The ftServer® W Series 5700 system from Stratus Technologies is the industry's first fault-tolerant server to use Dual-Core Intel® Xeon® processor technology. The two-way server (with eight processing execution cores) provides 99.999% uptime and is ideal for enterprise business processing and multitasking applications.

The ftServer 5700 supports the Microsoft® Windows® Server 2003 Enterprise Edition operating system and uses Stratus-engineered chipsets and the company's patented Continuous Processing® technology to bring premier continuous availability to decentralized mission-critical computing.

The server is available with the Virtual Technician module (VTM), a fault-tolerant remote access controller that connects to the fully fault-tolerant Stratus® ActiveService™ Network to help ensure the highest reliability possible. The ftServer 5700 also supports the Stratus Active Upgrade™ technology for online patching, hotfixes, and upgrades.

TRENDnet bundling Skylook's unified messaging software with its own line of Skype VoIP-oriented products. Skylook's software integrates Skype functionality directly into Microsoft Outlook, letting users place VoIP calls to and from contacts in Outlook. TRENDnet also announced plans to launch a new family of wired and wireless handset and conference phone products. Beginning this month, these products will include a free 14-day trial of Skylook's software.

Mobility

■ Motorola launched the latest iteration of its MOTOPRO Mobility Suite, designed to allow users to securely access enterprise information from an authorized mobile

device. The new version now includes a contextual search function, which lets users access and search structured data sources such as ERP and CRM databases, as well as unstructured data sources, such as email and Word documents. The suite utilizes the Google Search Appliance's OneBox For Enterprise feature to deliver a fast and recognizable search interface to mobile users. The new feature works with Motorola Q smartphones, HC700 rugged handhelds, and other enterprise devices. The contextual search capability should be available in the fourth quarter.

Network & Systems Management

■ Alterpoint and Cendura announced the Cendura Cohesion Alterpoint Adapter that

uses the Cendura Cohesion Adapter with AlterPoint's DeviceAuthority to offer a cross-domain change and configuration management software. The Cendura Cohesion Adapter collects Device-Authority's network configuration data to help enterprises and service providers monitor and manage compliance, security, change, and inventory. The Cendura Cohesion Alterpoint Adapter lets customers using both companies' software observe infrastructure changes either in or out of band. The end-to-end configuration management lets customers inventory the network devices that support applications and services, exact configuration settings for managed network devices, and populate CMDBs (Configuration Management Databases) with network asset and configuration information. Once the data is collected, customers can find change and rule violations on a service's configuration.

.

■ Attachmate announced Verastream Host Integrator 6.0, a screen-based access software for legacy data and logic on mainframe systems. The Verastream Host Integrator increases legacy functionality to applications that interoperate in SOA (service-oriented architecture) and offers flexible application development for ongoing projects. Developers can encapsulate data and logic from the screen interface to create services and components that can be mixed, matched, or reused. IT organizations can extend their legacy assets for use in SOA-based Web, portal, CRM,

Less Energy, More Memory

SuperMicro's Servers Aim For Efficiency & Reliability

by Daniel P. Dern

TODAY'S OFTEN-HOTTER servers can build up dangerous "microclimate" heat spots, which forces upgrades to cooling solutions, along with higher utility bills to pump the heat out

Chipmakers AMD and Intel have been working on more energy-efficient processors, and "Woodcrest," Intel's dual-core Xeon 5100 series processor, is one of these.

Not surprisingly, system vendors, including HP and IBM, have been working on ways to build servers, including higherpower n-way ones and densely packed blade servers, that generate less heat and cool more effectively. Supermicro Computer is helping IT keep its cool and save some change, even as it migrates to new systems based on Intel Woodcrest processors, with its new "earthfriendly" X7 series of chassis and motherboards opti-

mized for system performance, energy efficiency, and reliability.

The company recently announced over 30 platforms intended for the Woodcrest chip, including a number of energy-saving and cooling innovations and improved

onto the DIMMs, providing more cooling while minimizing the noise." The new chassis also accommodates more DIMM boards—16—than the previous generation, allowing a chassis to hold more memory.

"It's notable when even a vendor like SuperMicro starts putting effort into energy savings," says Gordon Haff, an analyst at Illuminata, a technology advisory firm. "That's as good an indicator as any that this is a very broad-based, mainstream concern."

For example, SuperMicro's high-density SuperServer 6015B-8+/T+, using Super-Micro's X7DBR-8+/i+ serverboard, can support up to 64GB of DDR2 memory, as well as four hot-swap SCSI/SATA drive bays and a 700-watt power supply, in 1U. This doubles memory capacity and system performance and also lowers energy costs

SNAPSHOT

SuperMicro X7

Starts at less than \$1,500

For Intel Woodcrest Xeon servers, SuperMicro's new X7 chassis and motherboards need less energy, make less noise, and can hold more memory

www.Processor.com/Super

Competition to SuperMicro includes established Tier 1 PC/server vendors such as Dell, HP, and IBM and companies such as Intel, Tyan, and Rackable Systems, according to SuperMicro.

"By designing and building our own power supplies, we can make better overall systems, like a 1U system with more overall power efficiency, and that can take more memory and I/O than most of our competitors," says Don Clegg, senior director of business development at SuperMicro. "You might be able to find something else with the same efficiency level, but it would have a different form factor or be noisier. Our strength is in the component design taking the full system into account."

"It's notable when even a vendor like SuperMicro starts putting effort into energy savings."

- Illuminata's Gordon Haff

thermal reliability, all helping reduce the TCO, according to the company.

"Our new power supplies, which are optimized for Woodcrest, are 85%-plus efficient," says a company spokesperson. "We have modified the chassis with a special teardrop design that funnels more air

while operating at lower temperatures compared to previous generations, according to SuperMicro.

Pricing for a 1U "barebones" SuperMicro X7 system (motherboard, chassis, power supply and cooling, but no CPU, RAM, or hard drive) starts at less than \$1,500.

50% More Storage

Overland's ARC vault Family Boosts Tape Automation Capacity

by Ed Tittel

IN AN ERA WHEN disk drive capacity is approaching 1TB per unit and where disk arrays routinely manage 2, 4, or 8TB of storage, backup becomes an interesting problem. There can be problems with space, in that many backup systems can't accommodate more than 10TB, and quite a few offer less than half that capacity. There can also be problems with time, especially for full or complete backups, in that time windows

available for performing backups may not be wide enough for them to complete before users return to their desks, ready to once again take over corporate networks.

San Diego-based Overland Storage's new ARCvault family can deal with at least half the time and space dilemma. Its new ARCvault 12 Autoloader offers up to 9.6TB of storage capacity in a 2U rackmount form factor, and its ARCvault 24 rack-optimized library doubles that capacity to 19.2TB with the same 2U

footprint. The company also offers removable 12-tape cartridges that fit into add-on tape magazines for both units (the ARCvault 12 handles one of these, while the ARCvault 24 handles two) to permit easy media rotation and easy extraction for offsite media storage.

As is typical with most automated tape systems, both ARC-vault units support both LTO-2 or LTO-3 tape drives (but attaining the highest capacities requires the LTO-3 tape drives, rated at typical compression ratios; using

SNAPSHOT

Overland Storage ARCvault 12 & ARCvault 24

Start at \$5,000

Incorporate automated tape loader and tape library units to provide up to 19.2TB of storage in a small form factor (mostly 2U rackmount) at highly competitive costs per gigabyte

www.Processor.com/Overland2

LTO-2 drives cuts rated capacities in half). Both units include a built-in barcode reader, a touchscreen panel for direct control and in the small to midsized enterprise market. There, Overland's chief competition comes from companies such as Qualstar, whose

Both ARCvault units include a built-in barcode reader, plus remote management through a 10/100 Ethernet interface.

management, plus remote management through a 10/100 Ethernet interface. The standard data interface is SCSI, where LVD SCSI Ultra 160 is used for LTO-2 drives and LVD SCSI Ultra 320 for LTO-3 drives. Data transfer rates for these units are rated at 187.2 and 374.4GB per hour for LTO-2 drives (for ARCvault 12 and 24, respectively) and at 576GB per hour for LTO-2 drives for both units.

These units' compact form factor and relatively low cost per gigabyte make them strong competitors

RLS-4445 rackmount system tops out at 11TB (www.qualstar.com); Unylogix, whose Spectra 10000 tops out at just over 10.4TB (www.unylogix.com); IBM System Storage TS3100 Tape Library Express, which tops out at 8.8TB or 17.6TB using 2:1 compression (www.ibm.com); and ADIC's Scalar 24 tape library (www.adic .com), the only SME offering we found that matches the ARCvault 24's 19.2TB of capacity, albeit in a 4U package. This puts Overland in a good market position, at least for the time being.

Continued from Page 20

mobile, contact-center, or Web self-service. Verastream Host Integrator 6.0 features include automated session management and recovery, integration and control of Web-based projects, a debugging tool that shortens the time to create a production-ready project, and model deployment and testing.

Security

- AdventNet released SecureCentral PatchQuest 4.2, automated Web-based patch management software. The software distributes and manages security patches, hotfixes, and updates among networks running Windows, Red Hat Linux, and Debian Linux operating systems. The Secure-Central PatchQuest 4.2 update can scan and patch Windows systems with OSes in 26 different languages. SecureCentral PatchQuest 4.2 also features Web client-toserver communication over HTTPS, provision to use a proxy-server that supports NTLM-based authentication, and improved server startup and system scanning. SecureCentral PatchQuest price starts at \$695 for 100 systems and includes an annual subscription fee of \$300 and a one-time server fee of \$395.
- ElcomSoft's AINPR (Advanced Intuit Password Recovery) can help Quicken users who forget passwords to specific files. The software supports Quicken versions 4 through 2006, QuickBooks versions 3 through 2006, and Quicken Lawyer. The software supports multilingual passwords, but it does have limitations with specific versions. For instance, in Quicken 2002 and QuickBooks 2003 through 2006, only short passwords are recoverable (although

the software can remove passwords four or more characters in size). For Quicken 2003 through 2006, only dictionary attacks are available.

ElcomSoft also introduced AOPR (Advanced Office Password Recovery). Three different versions of the software are available. The Home version can only recover passwords for Microsoft Word or Excel documents. The Standard edition adds the ability to recover or remove passwords for VBA projects created in Word and Excel, unlock Excel plugins, recover "password to open" passwords for Access, and all Outlook passwords. The Professional edition adds support for recovering Access user-level passwords and all Microsoft Office products. In Word/Excel 97/2000/ 2003/XP, the software uses brute-force dictionary attacks.

- nCipher released the updated version of its keyAuthority suite, which handles security and encryption for files and data being accessed by customers, partners, and remote employees. Some of keyAuthority's new features include support for triple-DES and AES key types, on-demand management of keys and end-points, and End Point support for PKCS#11 and Microsoft's Cryptographic API. The goal of the enhancements is to not only secure the IT infrastructure but to secure the data itself, regardless of where it resides or its current life cycle stage.
- Version 3.0 of the Skybox View suite is now available from Skybox Security. The security risk management software attempts to make it easy for IT personnel to analyze the security of an organization's processes and policies. Compliance, IPS

modeling, and automatic firewall auditing are some highlights. Check Skybox's site for related announcements.

.

■ Sunbelt Software announced Counter-Spy 2.0 Web Client software to remove spyware from infected PCs through desktop scanning. The CounterSpy 2.0 Active X agent can be deployed from a hardware appliance or other Web-based resource to fix an infected PC. CounterSpy 2.0 Web Client has an Active X scan and remove utility to detect and remove spyware with a temporary client installation. If CounterSpy 2.0 Web Client detects malware, it can quarantine a workstation from the Internet and force a scan and removal of any malware. Based on the configuration, the workstation user will then be redirected to a page that initiates a scan and removal.

Storage

- 3PAR released 3PAR MPIO (Multipath I/O) for IBM AIX (which is software for AIX servers that connect to 3PAR InServ arrays). 3PAR also paired its InServ Storage Servers with IBM System p5 servers. The InServ Storage Servers include 3PAR Dynamic Optimization (which can change RAID levels, disk type, and other settings via one command) and 3PAR Thin Provisioning. The IBM System p5 servers include Advanced Power Virtualization and Virtual I/O.
- HT FileStore has been updated with a new text-based content search capability, BridgeHead Software says. The file archiving software for multiplatform environments now offers browser-accessible search based on Apache's Lucene engine.

One difference from competing systems is that although HT FileStore can search any data, it retains the privacy rights on the data it finds.

■ Overland Storage has announced REO Protection OS 3.0 for the company's REO SERIES disk-based backup appliances. The new operating system provides faster D2D2T backup. The latest version of the software offers faster single- and multistreaming through both iSCSI and Fibre connections. With REO Protection OS, companies can install REO appliances in any existing backup environment without necessitating any configuration changes or adjustments to policies. The software also features a browser-based GUI.

SERVICES

Hosting & **Disaster Recovery**

■ EVault introduced its business continuity consulting management practice, which is designed to minimize the impact of system outages and service interruptions for SMEs. The service's consultants have up to 18 years experience in dealing with outages, crises, and other disastrous events. EVault's consultants build a plan that takes into account the people, processes, environment, and IT systems infrastructure in an attempt to reduce lost productivity, maintain data access, and eliminate the unforeseeable consequences of downtime. The service also conducts walkthroughs and exercises, handles the recovery strategy, and maintains and updates procedures over the course of a business' evolution.

Mail Foundry 1150 - Antispam Appliance Designed For The SME

The MailFoundry 1150 antispam appliance blocks 100% of known spam and viruses with the lowest false-positive rate in the industry of less than 1 in 1,000,000. MailFoundry has a team of human editors who create Spam Profiles around the clock, designed to block specific spam without creating false positives. These updates are automatically distributed to MailFoundry appliances worldwide every five minutes and immediately applied to defeat spam outbreaks as they happen.

MailFoundry has developed its own filtering engine, known as MessageIQ, which runs on a PC-like platform with a hardened Linux OS. And while the entry-level 1150 is not designed for rack-mounting, it is compact enough to be unobtrusive. The MessageIQ engine is a multilayer filter, incorporating traditional techniques such as blocked senders, real-time blackhole lists, and reverse DNS lookup and adds what MailFoundry terms spam profiles—custom-built, targeted message identifiers. These human-crafted profiles are similar to virus signa-

tures in that they don't rely on brute force checksums, hashes, or lexical analysis but are based on repeatable message attributes used by particular spammers.

- For up to 150 users
- MessageIQ antispam/antivirus engine
- Desktop or shelf-mount chassis
- 12" (305mm) x 2.1" (54mm) x 11" (279mm) • Outbound email scanning
- Easy-to-use Web admin interface
- 90-day hardware warranty
- M-F telephone support (7 a.m. to 8 p.m. CST)

The MailFoundry 1150 is available for \$799 with a yearly subscription cost of \$99 for up to 150 users and can be ordered online at www.Processor.com/Mail or by calling 1-888-302-6245.

It not only fits on the shelf, it fits in the budget!

Business Continuity Appliance

STORServer Business Continuity Appliances are a suite of fully integrated data protection solutions for backup, archive, disaster recovery, and lifecycle management. Each turnkey appliance includes matched and certified hardware and preconfigured heterogeneous software for easy-to-use, policy-driven, comprehensive data protection.

STORServer EZ Backup is the latest addition to the STORServer Appliance suite. EZ Backup Appliances offer the same functionality as the Business Continuity Appliance suite but are built exclusively with IBM components. EZ Backup also offers an entrylevel solution built on IBM Express.

Built for small and medium-sized businesses (SMBs), STORServer Appliances are scalable, enterprise-wide solutions that support most popular platforms, including database, email, OS, NAS, SAN, LAN, WAN, and mobile, with just one point of contact for warranty and support.

All STORServer appliances are delivered production ready, with everything you need to begin installing clients right out of the box. Typical client installations are deployed within 48 hours.

New DataPort 25 'Mobile & Secure' Removable 2.5-inch Drive Enclosures

The DataPort 25 makes 2.5-inch hard drives removable from any standard 3.5-inch bay such as the floppy bay in PCs and servers, making it ideal for data backup, data transporting and archiving, or applications such as mobile computing and surveillance.

New DataPort 25 'Mobile & Secure' Drive Carriers combine the benefits of both removable drives and rugged external storage devices. Operating at full transfer rates while in the bay, the new carriers also allow users the versatility to take their data elsewhere and access via USB or FireWire without the tether of a power cord. Optional encryption provides ultimate data security.

CRU-DataPort offers several removable drive carriers to choose from and a universal frame that supports them all:

Standard Carriers accommodate two PATA or SATA drives to double capacity or create a palm-sized RAID for data integrity or improved performance.

USB or a combination of USB & FireWire are available for ultimate flexibility in remote data access.

Add hardware-based full disk encryption for real-time encryption of the entire disk contents while using no system resources.

- · Drive Carriers lock into frame for security
- · LEDs indicate drive activity, power-on status, and system errors
- Heavy-duty stainless steel construction
- 25,000 insertion-rated connectors

Erase Hard Drives In Just 5 Seconds With The V660 HDD Evo

Verity Systems the world's leading developer and manufacturer of degaussers and bulk tape erasers. The company's new V660 HDD Evo is a unique, infraredcontrolled degausser designed for the permanent and safe erasure of hard drives.

A degausser erases media by applying a strong magnetic field that destroys all information recorded on the media. While in most cases this will render the hard drive inoperative, the cost of a replacement hard drive cannot be compared to the cost to a company if sensitive information can be read by a third party. The V660 HDD Evo has a very powerful, concentrated magnetic field that ensures that hard drives are erased in just 5 seconds.

Verity Systems Inc.

5441 Merchant Circle, Unit A Placerville, CA 95667 Toll Free: (800) 642-5151 Phone: (530) 626-9363 Fax: (530) 626-9395

Operation is simple. Hard drives are placed into the V660's receptacle, the lid is closed, and the degauss button pressed. What's more, with safety in mind, the V660 HDD Evo is the only hard drive degausser that can also be operated remotely via an infrared control from a distance of up to 15 meters. For added security, the V660 can be locked in the infrared operating position so that unauthorized usage cannot take place.

Key Features:

- Effectively erases hard drives
- · No need for operator to handle drive during degaussing
- 5-second erase cycle
- Remote control, operation from up to 15 meters
- High energy for complete erasure
- Tabletop design
- Cost-effective

MPC COMPUTERS INTRODUCES THE TRANSPORT® T1300 NOTEBOOK

This new system features the latest in notebook PC technology, such as the new Intel® 945GM chipset, TPM (Trusted Platform Module), and Bluetooth. The chipset supports 667MHz DDR2 SDRAM memory and can be powered by the optional Intel® Core™ Duo mobile processor technology.

Intel Core Duo mobile technology provides greater overall system performance by running multiple tasks simultaneously. TPM ensures greater protection and security, while the integrated Bluetooth technology enables wireless connectivity with a multitude of peripherals.

The TransPort T1300 offers many other enhancements as well. The system features a 14.1-inch wide-screen XGA display with 1280 x 800 resolution providing a sharp, clear picture. Additionally, the notebook incorporates Gigabit Ethernet, which facilitates faster network connection speeds. The 4-in-1 media card reader allows for quick and easy transfer of various media such as memory sticks, secure digital cards, or multimedia cards.

Is The Microsoft Documentation Team Keeping Up?

This week I planned to write about the European Union and how it's "encouraging" Microsoft to provide more information on the inner workings of Windows Server—about the same way that the IRS encourages people to pay up or lose their homes. But I'm having problems getting to the real issues, at least as far as developers are concerned. Most of my information is from periodicals, and most seem to be parroting the same source. In this latest EU attempt to come to the aid of the losers in the competitive software business, it seems its experts feel that 12,000 some-odd pages of documentation

do not provide enough information for the developers wanting to write code that could potentially compete against (or complement) Windows Server and its bundled toolset.

Microsoft says 300 people are working day and night to get this documentation up to spec. Sadly, this work is not to make the .NET Framework documentation better; it's to further document the "current" version of Windows Server. I asked my contacts at Microsoft to comment on this issue, but they have been sworn to silence. An MVP in Europe told me that not all of his co-workers, customers, or associates are happy with the atti-

tude of the EU officials itching to fine Microsoft "up to 10% of their annual revenue."

Documenting The Old Version

A problem with this frenzy to get XP and Windows Server documented is it's really obsolete as far as Microsoft is concerned. While Microsoft is frantically patching these versions as it finds loose bolts in the ceiling plates holding up the roof, its real focus is on making Vista its new OS platform.

Worse, the EU has not told Microsoft what it expects to see as far as bundled components or documentation in Vista. I guess it wants to see the real deal and how many of the little ducklings it's hiding under its skirts will be threatened by the new version before it decides how to react. I guess these timid companies who find trouble competing in an open market don't realize their companies wouldn't exist at all if not for the standard platform established by Microsoft (and the market).

Need: Good Documentation

Frankly, I expect any serious developer can benefit from any additional documentation and information about the inner work-

ings of the OS, even those working at Microsoft on ancillary products like Office, Visual Studio, and SQL Server. I think that the Microsoft documentation provided to developers for Visual Studio and the data access interfaces has gone downhill for a decade. As the OSes and interfaces have grown more complex (only to be constantly replaced by "new and improved" paradigms), the documentation teams seem to be having trouble keeping up. This is totally understandable based on the churn generated by these constant changes.

Having worked on the Microsoft documentation team for five years (and with it for 20 years), I have a pretty good idea how most of the developer documentation is written, especially the data access topics. In the COM-based Visual Basic days (and before), we documentation writers would work closely with the specifications written by the product managers and implemented by the language and data access interface coders to write meaningful help topics, product guides, and examples. We would also document the specific classes, objects, properties, methods and events, and the language topics used to manipulate them. No, coders and PMs rarely wrote clearly enough for most developers—English-speaking or not.

Today, when English might not be a person's first language, the job of the documentation writer is even more difficult. I only assume that the documentation being passed to the EU is in English—heaven help Microsoft if it has to be localized. The localized documentation I saw in the Visual Basic 6.0 timeframe was, well, challenged. I've had European developers say they prefer the English versions as it seemed the translations were made from English to Danish to Hindi to French by people born in Portugal.

Is .NET Framework Any Better?

I talked to an old friend still working at Microsoft, now on the documentation team. She tells me their staff had been cut repeatedly and much of the work farmed out to third parties, while their workload had been increased several fold. Considering that the .NET Framework alone is said to have over 70,000 classes, that's a lot of technology to document—not to mention the N new server server servers it's created lately.

Yes, I think Microsoft needs to make a profit, and I think change is inevitable. But I also think Microsoft needs to completely document what it's created before moving on to the new and improved version of the week. Perhaps if it did, the EU and developers worldwide would not be ranking its documentation as "Unacceptable."

OPINIONS

IT Purchasing Poker

Quite often in this industry the old adage that you get what you pay for is manifest, particularly when trying to save a buck or two on a purchase. But buyer beware, because there are manufacturers and vendors who are not beyond exploiting this belief, intentionally setting their prices higher, just to create a mystique of superiority. So how do you tell when the less expensive option is a bargain and when is it a sham? How do you tell when the more expensive option is really a better purchase and when is it an overpriced wannabe? Is an elaborate product "bake-off" the only way to tell? Nope, not if you're willing to play a little purchasing poker . . .

Allow me to illustrate with a recent example here at Sandhills Publishing. We are trying to purchase a new antispam gateway. Our current system just doesn't cut it anymore, and we are moving forward with some new customer initiatives that will require us to have a bigger, better box than what we have now anyway.

I have looked seriously at no fewer than nine different solutions. Of the nine, I was able to narrow the list to three based on our basic requirements for administration, system capacity, and perceived trust in the technology. Unfortunately, narrowing that list of three to a single choice is proving far more difficult. All three of the remaining products promise essentially the same things, but prices range from about \$20,000 to \$320,000 up front and anywhere from about \$3,000 to \$53,000 in annual renewal costs!

The vendors of the less expensive options want to convince us that they can do everything the bigger boxes can for less money, and the vendors of the more expensive options want to convince us that the smaller boxes simply cannot keep up with half

of their claims. (Anyone else ever heard these stories before?) But with the extreme price range, I'm leery of all of them!

The vendors' solution is to go "all in." As in, they want me to bring "all" the products, from all the vendors "in" for a big "bakeoff," and they will be the first to provide me one of their products to try "absolutely free" for 30 days because they are just that confident we will pick their solution.

On the surface it sounds like a great offer, but to really test an antispam solution for my enterprise means fully implementing an antispam solution for my enterprise! I do not care if the box is here for no cost or not, our time to implement that solution is not free. And the vendors know this. They do not really want a bake-off; they want to be the first product tested, because if it works, they know you will be hard-pressed to justify going through even more work to yank their solution back out, take away some feature the end users now expect, and go through it all again with another unknown product/ vendor, all in the name of testing.

MICHAEL DEMPSEY

Michael Dempsey is the information technology manager of Sandhills Publishing and technical editor of Processor magazine. He has more than a decade of experience in voice and data communications and holds current CCNP and CCDP certifications. Demnsey is an expert in network security, virtual private networks, and IT infrastructure.

The Card Cam

As exciting as it may be to watch poker players on TV go "all in" and win, it is important to remember their opponents went all in and lost! When my career is involved, I tend to prefer a more conservative approach. Metaphorically speaking, I don't need to go "all in" on a mediocre hand to gauge what the other players have; I only need to bet enough to expose the bluffers.

I place my bet by arranging to test the most cost-effective solution I think I can live with and prepare to follow through with the test. Then I call the vendors of the more expensive solutions and tell them I decided to purchase (note I did not say "test") the less expensive option. Obviously, there will be some initial disappointment believing they just lost the sale, but what happens next can tell you volumes about their real opinion of your decision because they have been in this position before. Every

salesman has won some, and lost some, to the vendor you tell them you've selected. Their level of panic at your decision will tell you how many of those sales they lost in the past, how many have come back, and how many were gone for good.

Those that really know the competing product will not last in your environment will begrudgingly accept the news, let you learn the lesson for yourself, and realize they have an easier sale waiting for them down the road when you come back. Those that realize the competing product will actually do what you are hoping will panic and do everything they can to get you to give their product one more consideration before you make the worst mistake of their lives. If you learn to read their responses, it's almost like playing poker with the aid of the little card camera the home audience sees!

Accusys InneRAID™ ACS-75190/75191 PATA RAID 1 Box

The ACS-75190/ACS-75191 RAID box is an excellent solution of protecting data and improving system availability for industrial computing and communication platforms. It performs block-level data mirroring to protect data of all types and of any operating systems. It also seeks to secure every bit of your data while streamlines the IO access serving by its intelligent DriveRectifier™ technology.

Connectivity

• ACS-75190: SCSI-PATA • ACS-75191: PATA-PATA

• ACS-75192: SATA-SATA

Features

- Hardware-accelerated RAID 1 (mirroring)
- Support 2.5" PATA notebook disks • Driverless: need no driver on host side
- Hot swappable hard disks
- · Automatically on-line data rebuilding
- On-line bad sector recovery
- Key lock against unauthorized access
- LED indicators for disk status display

Form factor

 Two 3U compact PCI slots or one 5.25" full-height drive bay

DriveRectifierTM Technology

- Assured Real-Time Non-Stop availability with High Performance
- Online drive traveling and array roaming
- Event logging and notification by audible alarm, pop-up windows, or e-mail
- Web GUI with auto-started agent
- RS232 interface for firmware update and GUI
- · Open API for proprietary GUI and inte-

Based On Intel® Core™ Duo Processor & **Mobile Intel® 945GM Express Chipset Embedded Motherboard—MB899**

The MB899, a Mini-ITX motherboard, supports the latest Intel® Core™ Duo processor and the Mobile Intel® 945BM Express chipset. The latest Intel® Core™ Duo processors give you the competitive edge in the ever-growing embedded market. The Mobile Intel® 945GM Express chipset provides greater flexibility for developers of embedded applications by offering improved graphics and increased I/O bandwidth.

This new embedded motherboard offers intelligent power management capability and greater performance per watt, which enhances the enduser experience for medical, multimedia, industrial automation and gaming applications.

MB899 Features:

- Intel® Core™ Duo processor
- Mobile Intel® 945BM Express chipset
- Two DDR2 DIMM Sockets
- Supports CRT, LVDS, optional TV out or DVI
- 10/100BaseT LAN, PCI Express Gigabit LAN
- SATA x2, USB x6, Digital I/O, Watchdog timer
- PCI x1, PCI-E (x1) x1, Mini PCI x1, optional Mini PCIe x1

Maximize the performance of your servers with

As an IT Pro, you know the importance of maintaining server performance and reliability. If the servers slows or worse crashes, who gets called? That's right...you or your IT staff. This "break-fix" cycle leaves you little time to be proactive. And yet, many of these issues stem from a single, hidden source...DISK FRAGMENTATION!

Fragmentation is the cause of many networking problems, yet few IT managers realize how much damage is being done until it is too late. Fragmentation severely overworks servers and shortens their lifespan, leading to expensive and premature replacement.

Diskeeper's breakthrough technology ensures maximum performance by stomping out fragmentation for good!

- NEW! I-FAAST™ (Intelligent File Access Acceleration Sequencing Technology) gives a tremendous boost to file access times, significantly lowering the time it takes to retrieve data.
- EXCLUSIVE! Terabyte Volume Engine™ created exclusively by Diskeeper to handle today's large volumes, SAMS, RAIDs, and NAS quickly and efficiently.
- NEW! Core enhancements provide faster, more thorough defragmentation.
- NEW! Enhanced I/O Smart™ intelligently provides transparent defragmentation ensuring uninterrupted system operation.
- NEW! Enhanced user interface makes it easier than ever to configure, schedule, and run reports on the health of your disks, peak performance, and fragmentation status.
- NEW! Native 64-bit operating system support.
- EXCLUSIVE "Set it and Forget It"® SmartScheduling™ for automatic defragmentation of your entire system.

Every system needs Diskeeper, the Number One Automatic Defragmenter™, with over 20 million licenses sold!

SPECIAL Try Diskeeper 10 FREE for 45 days! Download: www.diskeeper.com/pro5 OFFER: (Note: Special 45-day trialware is only available at the above link)

SuperTrak EX16350/EX16300 16-Port SATA 3Gbps RAID Controller

From Promise Technology

SuperTrak EX16350/EX16300 highlights:

- · 16-port SATA 3Gbps
- advanced RAID controllers · Intel IOP 333 (EX16350)/331
- (EX16300) processor
- RAID support 0, 1, 5, 6, 10, 50 PCIe (EX16350) and PCI-X
- (EX16300) host bus interfaces Web-based WebPAM™ man-
- agement software Linux open source driver
- available 256MB onboard cache
- Dual controller support
- Optional battery backup module available

The SuperTrak EX16350 and EX16300 from Promise Technology are Intel IOPbased RAID5/6 controllers that combine high performance with unbeatable prices. The SuperTrak EX16350/16300 controllers include Promise advanced RAID features such as multiple logical drive support, media patrol, and bad sector remapping for maximum data protection and management.

The SuperTrak series is designed to fulfill the needs of SIs and OEMs with demanding data storage requirements. The SuperTrak controllers deliver exceptional multidrive performance by taking advantage of Intel's XScale IOP I/O processor technology to offer the ultimate RAID 6 protection for high-level fault tolerance, allowing multiple simultaneous drive failures without downtime or data loss so your data is always

Introducing the New AccuNAS Series

Call For Details

Introducing the New AccuNAS Series, the latest enterprise level NAS (Network Attached System) from Sans Digital your one-stop storage solution provider. This versatile series features both Linux based and Windows based NAS. Our New AccuNAS Series is sure to meet all of your storage needs.

- World's most advanced 1U NAS system featuring an Intel Pentium D Processor w/ built-in Dual Gigabit Network
- · Built-in NAS-to-NAS Replication
- iSCSI Target Function for unlimited initiator support
- Multiple Volume Snapshots & Snapshot-On-Demand
- Scalable with AccuStor Fibre or SCSI RAID Subsystem
- 47~57MB/s Read, 68~74MB/s Write & 105MB/s Write Burst

Please visit www.Processor.com/SansDigital to see our full line of RAID Storage Products, including Rackmounts with Ultra 320, SCSI, & Fibre Channel Interfaces!!!

Systems now support up to 750GB Hard Drives!

UltraStor™ - IP SAN Storage System

Ultra Fast & Flexible Host Engine from Fibre Channel, iSCSI, and SCSI

RS 8 IP - 10/100/1000

RS 16 IP - 10/100/1000

Enterprise RAID Performance

The original UltraStor product line capitalized on Enhance Technology's hybrid storage expertise by combining SATA disk drives with either a SCSI or Fibre Channel host interface. The UltraStor IP utilizes newer, faster Serial ATA 3Gbps disks and is powered by the latest microprocessor to deliver up to 220MBps over a Gigabit Ethernet network, enough bandwidth to exceed the demanding requirements of many network-based applications. With UltraStor IP, Enhance has created a product that supports multiple hosts and runs on both the Windows and Mac OS platforms while offering easy configuration and integration into virtually any hardware or software environment.

Key Features Include:

- Hybrid Serial ATA disk-based storage, compatible 1.5 and 3Gbps disks
- Embedded hardware RAID controller with dual GbE ports
- 2U or 3U modular rack design easily integrates into existing storage infrastructures
- 2 GbE full iSCSI offload with load-balancing and failover • One logic volume shared by as many as 16 hosts
- Windows VDS/VSS/MPIO support, host access control, and CHAP
- Easy LCD control, Remote monitoring, and RAID management over TCP

Full iSCSI Benefits

The UltraStor IP system has dual GbE ports, supporting full iSCSI offload with loadbalancing and failover and one logic volume shared by as many as 16 hosts. Other new features introduced in the UltraStor IP system include MPIO support, S.M.A.R.T. disk monitoring, target authorization via IP address, and Jumbo frame support.

UltraStor Product Availability and Host Flexibility

UltraStor IP is available for immediate delivery in the form of a 2U eight-disk RS8 IP model, which has the storage options of 1TB, 2TB, or 4TB; the 3U 16 RS16 IP model can go up to 8TB.

TallyGenicom's New High-Speed Serial Matrix Printers Have Multiple Connectivity Solutions

TallyGenicom announced the 2265+ and 2280+ models of the 650 and 900 cps serial matrix printer family for time sensitive and critical business printing applications in industries such as warehousing, manufacturing, transportation, retail, and others that require multipart forms printing.

The 2265+ printer is available in a variety of configurations, making it the ideal choice for multiple connectivity environments. The configurations include parallel only, parallel with serial, internal Ethernet, PCL, and LAN IPDS for IBM AS400/iseries users. List Prices range from \$1,845 to \$2,227.

The 2280+ is available in a variety of configurations, including serial, parallel, PCL, internal Ethernet, and LAN IPDS. List Prices range from \$2,543 to \$3,709. The 2280-2T+ will be available in July 2006 for users that require the ability to print up to ninepart forms for use in industries such as transportation, customs brokerage firms, and the healthcare field.

"By adding this robust and comprehensive product line to our offering, TallyGenicom is continuing our commitment to our customers by being the solution provider for their changing serial matrix printer requirements" says Chuck Ward, serial matrix product marketing manager at TallyGenicom.

TallyGenicom continues to support Digital /Compaq serial matrix printer users. Included with this announcement is the release of the LA650 + and LA800+ for these legacy applications. These new printers replace prior models 2265, 2280, 7265, LA650, and LA800.

High-Definition Line Matrix Printer For Windows-Based Applications

The new **P7000HD Series** prints True TypeTM fonts, logos, and bar codes accurately, giving users a cost-effective and highly reliable alternative to the laser printing of reports, bills of laden, forms, and labels.

Created as a cost-effective alternative to Windows™-based laser printing applications, the new P7000HD series is optimized for graphics printing demanding the highest reliability. It is the only line-matrix printer available in the market today that can operate seamlessly in a Windows environment and emulate all of the fine details required for TrueType fonts, fine print, logos, and bar codes.

quired for TrueType fonts, fine print, logos, and bar codes.

Printronix designed the P7000HD for applications typically found in manufacturing, banking, distribution, and transportation environments, such as the printing of reports, bills of laden, multipart forms and bar-code labels. The P7000HD features 11-mil (0.28mm), fine-point hammer tips that print at least 180 x 180 dots per inch (dpi). This resolution rivals the print quality of laser printers at a fraction of the operating cost.

- High-Definition print image 180 x 180 dpi and fine tip hammers
- High quality rendering of complex fonts, small point sizes, lines, logos, bar codes, and PDF files
- Direct drop-in replacement for Windows-driven laser printers
- P7000 Ultra Capacity HD ribbon Extra long life with darker sharper print
- Integrated Print Management total visibility and control of image quality and consumables
- Low cost of operation typically 10x lower than laser or serial matrix
- Forms flexibility straight paper path and heavy-duty pulling power
- Super rugged design holds up to abuse and harsh environments
 100% duty cycle designed for relentless printing
- Whisper quiet operation models range from 55 dBA, which is less than an office laser
- Pedestal, quiet cabinet, and zero tear models available

InfiniHost III Ex Dual-Port InfiniBand HCA Cards With PCI Express x8

In addition to the deployment of 20Gbps InfiniBand in multicore server platforms, blade server platforms are driving this connectivity performance into mainstream data center and high-performance computing environments. The industry is complementing these computing platforms with a wide range of 20Gbps InfiniBand infrastructure solutions from vendors including Cisco Systems, SilverStorm Technologies, and Voltaire. The growing ecosystem of InfiniBand 20Gbps technology-based suppliers is heralding the dawn of a new generation of cluster and grid deployments where the bar for application performance and resource deployment flexibility is being raised to unprecedented levels.

InfiniHost III Ex dual-port 4X InfiniBand HCA (Host Channel Adapter) cards connect to the host system through a PCI Express x8 interface. SDR (single data rate) InfiniHost III Ex cards support dual 10Gbps InfiniBand connections while DDR (double data rate) versions support dual 20Gbps connections. InfiniBand InfiniHost III Ex HCA cards deliver the most cost effective 10 or 20Gbps solution avail-

able and feature RDMA (remote direct memory access), hardware transport, and advanced per QP (queue pair) QoS services.

- Dual 10Gbps (MHEA28-XTC and MHEA28-1TC) or 20Gbps (MHGA28-XTC and MHGA28-1TC) 4X InfiniBand Ports
- Integrated SerDes (Serializer/Deserializer) interfaces
- PCI Express revision 1.0a compatible card
- PCI Express x8 (20 + 20Gbps full duplex) interface
- IBTA version 1.2 compatible
- Copper InfiniBand connectors (MicroGigaCN) with media detect circuit for optional fiber media adapter
- · Linux management and applications package available
- Linux and Windows drivers
- InfiniBand Compatible Verbs API
- Various upper layer protocols
- ROHS-R5 Compliant

iStor GigaStorATX™

GigaStorATX is the Newest Generation iSCSI RAID Controller, providing the very best price/performance ratio and most feature-rich integrated iSCSI storage controller solution available in the marketplace. iStor Networks offers the GigaStorATX in a multiple port 1GbE and a single port 10GbE version. Both products are designed to conform to industry-standard ATX form factor specifications, allowing use of off-the-shelf PC Server and Storage chasses. The GigaStorATX allows OEMs, VARs, and System Integrators to offer competitively priced, performance orientated storage subsystems with an integrated storage firmware stack, lowering the cost of overall maintenance, providing greater ROI and increased customer satisfaction.

- RAID Levels 0,1,10 & Parity
- One 10GbE XFP pluggable iSCSI port (10GbE)
- Up to eight GbE iSCSI ports (GbE)
- Persistent and Adaptive Cache Management
 Up to 4GB Standard ECC DDB SDBAM with
- Up to 4GB Standard ECC DDR SDRAM with 72-hour Battery Backup
- VLAN-based Zoning
- Volume Virtualization
- Link Aggregation, Multipathing, and Load Balancing
- Support for up to 16 SATA devices
- IP SAN Device Manager
- Event notification via SMTP mail
 Enclosure Management Services (Chassis dependent)
- RAID level migration
- Online capacity expansion
- SMI-S Support
- Support of Windows, RedHat, SuSe, and MacOS
- Many more features—ask your iStor Sales Representative for the detailed list

GigaStorATX eliminates the need for Server or Motherboard Technology. The technologies from iStor Networks offer a complete iSCSI storage system-on-a-chip, coupled with an integrated storage virtualization firmware stack and SMI-S-compliant management suite.

Product Flexibility, Superior Price, and **Best-in-class** Performance with up to 1,160 MBps cache read performance for faster business continuity and disaster recovery applications.

Know Your Security Plan

This Handbook Can Keep You & Your Enterprise Out Of Trouble

by Bruce Gain

MANY IT ADMINS have probably grown tired of the incessant stream of articles and books stating the obvious about the importance of network security. For this reason, "Syngress IT Security Project Management Handbook" might make you think the book represents yet another spin on security with nothing new to say.

Key Concepts

- Organizing your security operations requires an operational framework and a comprehensive plan with many steps and an empirical approach.
- · Your organization's security operations should be characterized as the master plan with subcategories ranging from infrastructure to operational security.
- · If your network's security operations lack certain standards of care, you could be held liable in the event of an attack.

Instead, "IT Security Project Management" is not so much about security as it is about creating what the author calls "an operational framework" to comprehensively ensure that your network is "secure as humanly possible." This means that while you may have superior skills in network security, your comprehensive plan and its organization must also be in order. Your network's security is only as good as its operational framework; if it's subpar, the consequences can have repercussions that go beyond just losing your job.

Do You Have A Plan?

From the outset, the author takes an empirical approach when describing how to lay the groundwork for a coherent security infrastructure. While assuming the reader is well grounded in IT project management and network security skills, the book begins by outlining how your organization's security operations should be characterized as the "master plan." Different subcategories of this plan range from infrastructure to operational security and are listed as

"individual focus areas" or "individual security area project plans."

In the chapter titled "IT Infrastructure Security Plan," the author describes in detail the elements involved in securing your network's infrastructure. The process of assessment is a key element in this chapter, which covers the network's environment, people, and technology. Different threats to your network's infrastructure and how to assess the

Internet and network for its business activities with 100 attached devices stands to lose \$250,000 from a security breach. For 250 attached devices, the book says, that damage can total \$500,000.

While adding a disclaimer that the book is not offering legal counsel, the author details the importance of using the input of an attorney when laying the groundwork for your network's security infrastructure. Legal liabilities that you

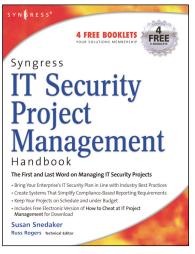

Your network's security is only as good as its operational framework; if it's subpar, the consequences can have repercussions that go beyond just losing your job.

risks they pose to your network are analyzed.

Selling Security To Your Boss

Much verbiage is devoted to the risks and legal liabilities of what can happen if your security operations are not in order. Citing statistics from the Computer Economics Group, the book notes how an enterprise that relies heavily on the face, as the book points out, range from noncompliance with a range of laws and statutes to charges of negligence.

If explaining the importance of network security by communicating the financial and legal risks the enterprise faces is not enough, the author offers detailed equations that show you how to quantify a security plan's ROI.

Syngress IT Security Project Management Handbook

Author: Susan Snedaker and Russ Rogers

(technical editor)

Publisher: Syngress Publishing **Price:** \$59.95

Format: Paperback, 656 pages

All 13 chapters and 612 pages are densely packed with information. However, it is the book's level of detail and thoroughness that may be a drawback for some, especially more macro-oriented managers or IT admins who will not have the time or patience to sift through all the chapters. Also, some sections devoted to describing basic network attacks may be too elementary for some. Still, for those seeking a resource for either starting from scratch or re-engineering security operations, the author's erring on the side of thoroughness has resulted in a definitive handbook on which one can rely.

Multifunction Printer

For users who are interested in purchasing a new MFP but also have extensive finishing requirements, Lexmark offers the new Lexmark X646ef laser printer bundle, which includes the new 4600 scanner, a T644dtn laser printer, and finishing capabilities such as stapling and sorting at an estimated street price of \$4,449.

The Lexmark X646ef is the first MFP in its class to feature a standard scan preview function to allow users to view a scanned document before it is processed. It is also the first MFP in its class to feature a USB port to allow users to scan to or print PDFs and images from a USB flash storage device directly from the operating panel. The Lexmark X646ef is the only MFP in its class with a color touchscreen interface and offers the fastest print speed in its class at up to 50ppm.

Effortless Backup & Recovery Appliance

Breece Hill's BizGuardian™ delivers an automated, highly reliable networked data protection solution for small to medium-sized businesses and departments of distributed enterprises. The new appliance integrates EMC Retrospect backup and recovery software with the speed of disk and the portability of tape, providing protection for more servers in less time.

BizGuardian is the only disk-to-disk-to-tape (D2D2T) appliance that fully integrates hardware and software into an easy to own, operate, and manage package.

Easiest to own – Get best-practice backup and recovery strategies out-of-the-box. Backup operations are automatically adjusted without the need for manual intervention; desktops and notebooks are automatically backed up when logged on to the network; and AES-encrypted tapes are created for safe offsite storage. Maintain continuous data protection with built-in disaster recovery (DR) using bare metal restore standards.

Easiest to operate - Eliminate the need for 50 full backups each year. Unlike other backup applications, you'll get fast backups and unparalleled restore accuracy. Other backup applications can only provide this level of restore accuracy to the day a full backup was performed.

Easiest to manage – No more complex strategies to protect against backup media failure or site-wide disasters. Eliminate complex tape rotation. Create two sets of tapes, one onsite for backup and restores, the other offsite for safety. Rotating tapes is vastly simplified with BizGuardian. www.Processor.com/BreeceHill8

CAS Levels The Playing Field

The Pros & Cons Of Content-Addressed Storage

by Tony Bradley

STORING AND MANAGING data can place a significant burden on computer hardware and software. It is common now for computer systems to come with 250GB or more of hard drive space, and with increased reliance on digital data for storing catalogs of music and pictures, it doesn't take too long to fill hard drives to capacity.

A study done by storage hardware manufacturer EMC in 2000 found that as much as 75% of the data being generated and stored was static data that would most likely never be modified or altered in any way. Data such as photos, medical images such as X-rays, financial statements, or scanned images of cleared checks all represent data that is unlikely to ever change.

Flattening The Hierarchy

The standard system of folders or directories that hold files and other folders or directories can become unwieldy. The locations of each file have to be indexed in a central file database of some sort so that the computer can find them when necessary. A file that is stored three or four levels down requires a long directory path name to locate it, and storing or archiving the data includes a lot of overhead necessary to remember where the file was saved.

Storing static data based on the contents of the file rather than the location of the file emerged as a concept that could make data storage and retrieval more efficient while also providing additional integrity and security for the files. Some refer to this type of storage as a flat file system because it lacks a hierarchical directory structure, but EMC coined the term CAS (content-addressed storage), and it stuck.

Mark Goros, CEO of Caringo, maker of CAStor, explains the need for a shift in how data is stored. "Traditional file systems were invented 30 years ago and were designed to store a few hundred files on a small hard drive (in those days 10 Megs was considered huge). Today, people and companies store millions of files on huge storage devices. Does it make sense to use that same old file system designed for a very different time and for different requirements? No. Traditional file systems are location-based. The fully qualified path is complex and prone to error if even one element of the path changes. If you swap drives, you'll never find your file. CAS gives one ID to each object. That ID is location independent. Wherever your object (file) is stored, the ID can still identify it."

Benefits Of CAS

CAS systems work by computing a unique hash or key for each file based on the actual contents of the file. For regulatory compliance with Sarbanes-Oxley, HIPAA, the Gramm-Leach-Bliley Act, and other mandates, the CAS file system provides a method of validating the integrity of the data. If the data is changed or altered in any way, the key associated with the data would also be changed.

From the perspective of archiving data, the flat file system of CAS allows backup data to use 1/10 of the space of traditional data stored on tapes. The hierarchical

structure requires redundant overhead to be stored in order to catalog the path to the proper location of each file. The unique ID associated with each file in a CAS system removes this overhead and reduces the amount of drive space required for backup.

The CAS Market

Some of the main vendors offering CAS products include EMC, Avamar, and Caringo. Microsoft has been pushing to develop a content-addressed storage product as well, but it has run into some hurdles. The Microsoft product, BitVault, has been developed so far by the Microsoft research team but is being moved to a product team as it approaches commercial readiness.

Each product uses an algorithm to assign unique IDs to data and remove the need to trace the directory hierarchy. Goros says, "CAStor is hardware agnostic. It runs on any x86-based platform. It is massively scalable, self managing, self configuring, and self healing. Caringo has a patent-pending, industry-first, transparent, upgradeable hash technique to future-proof your content integrity. Finally, CAStor is an order of magnitude less expensive than competing CAS solutions and never locks a user into a hardware corner."

All the products promise more efficient storage of static content, greater integrity, and reduced drive space. Caringo's CAStor may be attractive to SMEs because it's \$500 per drive regardless of drive size.

Content-Addressed Storage Vendors

The integrity, security, and efficiency benefits of content-addressed storage have led vendors, including big names such as EMC and Microsoft, to provide products that use the flat file system as opposed to the traditional directory hierarchy. Below is a list of the major CAS vendors and their products.

Vendor	Product	Description	Web Site
Avamar	Axion	Provides a disk-based backup and recovery solution using CAS for faster data restoration and higher reliability	www.avamar.com
Caringo	CAStor	Has a patent-pending, transparent, upgradeable hash technique you can use to future-proof data integrity	www.caringo.com
EMC	Centera	Delivers fast, affordable content-addressed storage from a solid storage vendor	www.emc.com
Microsoft	BitVault	Uses a peer-to-peer based model to store and manage data; not yet available for general use	research.microsoft.com

Access Tracking Manager For Your Reporting Needs

XTS Access Tracking Manager (ATM) is an off-the-shelf enterprise management reporting and analysis product for Citrix Presentation Server Enterprise Edition. It's perfect for quickly running reports on the wealth of data Citrix collects, including user, application, and server activity. Do this with little effort with our ATM, a product built based on feedback from the Citrix community. ATM provides turnkey, comprehensive usage reporting for Citrix environments. ATM is not another real-time monitoring product, but instead a robust historical reporting and analysis product built on a business intelligence platform—no data collection agents or coding required.

Benefits:

- Automatically schedule and distribute reports.
- Make procurement and capacity planning decisions based on application usage trends and server utilization.
- Provide business-friendly reports that will allow managers to track employee application usage.
- With ATM's scalable architecture you can run reports over unlimited time periods, such as for annual audits.
- Verify security policies with session reporting down to the minute.
- Integrate with IT dashboards or central reporting data warehouses with XML integration.
- Adhere to compliance and governance with named-user application usage reports over any time period.

nLayers InSight™ 4.5

The industry's only hybrid passive/active discovery solution

nLayers InSight is the easiest, most comprehensive solution for discovering, understanding and mapping the complex relationships between applications and technology infrastructure.

Applications, services and servers in nLayers Application Behavioral Model nLayers is the only discovery vendor that offers instant, passive discovery for immediate, end-to-end real-time visibility and the flexibility to selectively "drill down" and compile more detailed configuration information on specific servers or services. As part of the discovery process, nLayers InSight builds a detailed, time-based Application Behavioral ModelTM (ABMTM) of how and when the components interact with each other, and the transactions processed in each interaction.

nLayers' unique agentless top-down auto-discovery process maintains a realtime, interactive "living" model of the entire application infrastructure at a fraction of the time and cost of manual methods or other intrusive discovery methods. Discovering entities at a rate of 500 per minute, nLayers InSight builds an interactive application map and behavior model in a few hours. The application behavior model is then continuously updated with interdependencies, configuration and usage changes, and all the information is maintained in an open, federated configuration management database (FCMDB).

Using the optional Active Discovery module, customers may selectively choose the key servers or services essential to their business (such as specific application or database servers of business critical processes), to gather detailed configuration item (CI) information using a combination of methods, including SNMP, SSH, Telnet and WMI.

nLayers InSight is different from other discovery solutions in that it continuously monitors application usage and demand, allowing organizations to dramatically reduce operational costs and accelerate today's highest-priority IT initiatives. nLayers InSight offers real-time visibility without installing software on any system or adding traffic to the network.

Top Backup Tips

Experts Tell Their Best-Kept Secrets

by Julie Sartain

DATA CENTER MANAGERS are always on the lookout for improving their network backup processes. We interviewed just over half a dozen "backup and recovery" experts, that is, companies that specialize in backup and recovery software, hardware, and/or data retrieval services. We asked them to provide us with their best backup tips (as related

to speed, costs, and administration), but not just the obvious stuff; we wanted their secrets those special tips that most people don't consider when developing a backup plan.

Everyone agreed that frequent backups are vital and should be performed daily, at a minimum. They should be monitored, checked, and verified to ensure that all the necessary files are backed up, including the settings and configuration files.

"And if you plan to back up a server," says Carlo Alpuerto, IT manager of Acronis, "remember that you need more than just the OS, applications, and user files—you need all of the configuration files, updates, security patches, and the like."

"In addition," says Peter Carroll, founder and chief technology officer at Data Deposit Box, "be sure to back up the PCs, not just the servers. If you have a traveling executive with a laptop, they are also traveling with data stored on their local hard disk."

Tip #1: Train Multiple Staff Personnel To Perform The Backups

Cross training is the cornerstone for every task in every organization, no matter the size of the company. Why would you back up your data and not the staff who performs those backups? You can't afford to lose a single hour of data, and the person who performs the backups is just as vital as the backups themselves.

"Regular training on your backup software/procedures is a must," says Kevin Harris, CTO of Arnold Communications. "It is important to ensure that more than one person is fully capable of recovering a single file, a server, or entire infrastructure. Lack of knowledge during time of crisis will impact your confidence and ability to recover."

Tip #2: Continuous vs. Scheduled Backups

Database and other file backups are completely different: Databases are dynamic, always changing from minute to minute, while other files only change when they're saved. Continuous backups ensure that your dynamic data is always current.

"Choose continuous backup solutions," says Craig Randall, vice president of operations at Availl. "They eliminate the possibility of data loss between scheduled backups since data is secured as it changes. IT staffs should look for true, continuous backup vs. just preset restore points."

Tip #3: Security

Security is always a crucial issue, especially with backups. You must protect your data from theft, hackers, and spammers and from infection. If you back up a virus, you'll be restoring that virus. Be sure your backups are clean, and consider encrypting your data to protect it from hackers.

"Weekly reports of private data being lost and/or stolen should stop you dead in your tracks, making sure that you are taking all necessary precautions to ensure the security of your backup data," says Harris. "No matter what type of backup you are doing, encrypt it. And remember to manage your encryption keys very well. If you lose them (which is easy to do in a disaster), you've lost access to your backup."

Tip #4: Test Restores Frequently

Our panel of experts agreed that the restoration process should also be tested frequently. "While the daily challenge is to get a successful backup," says Harris, "many people overlook the more important challenge of being able to recover that data. Ensure that your backups are successful by performing restores. Successful restores prove that your backups are truly successful."

Best Tip: Location Is The Most Important Consideration

"Store backup data in a geographically remote location. If you are affected by a disaster, will your backup vendor also be affected? Storing data in a geographically remote location is the 'not so obvious tip.' If your office is destroyed due to flooding, what are the odds your local storage company is also?" says Data Deposit Box's Peter Carroll.

"Establish a relationship with a data recovery company as a part of your overall network backup procedures. At some point, it is likely that you will experience problems with your backup system that will require data recovery. It is best to have your recovery provider selected ahead of time so you don't prolong downtime when disaster strikes," says Jim Reinert, senior director of software and services at Ontrack Data Recovery.

"And for small networks, consider intranet peer-to-peer backup, which leverages free space on your desktop hard drives. P2P backup may be the most cost-effective desktop and laptop backup solution around," says Lakshmanan Narayan, vice president of marketing at Vembu Technologies.

Breakthrough Technology: Maximum System Performance – Automatically

It's a known fact fragmentation cuts directly across the integrity of your systems causing crashes, slowdowns, freeze-ups and even total system failures.

NEW Diskeeper 10 provides new adaptive technology designed to wring every last drop of performance out of every computer on your network.

No more complaints from users waiting 50 seconds opening a Word document, 45 seconds saving a file or 70 seconds searching for one.

With Diskeeper's advanced automatic "Set It and Forget It" technology, peak performance is maintained – automatically!

Diskeeper 10 "Set It and Forget It" Features

- NEW! I-FAAST™ (Intelligent File Access Acceleration Sequencing Technology), breakthrough disk performance calibration technology that boosts access speeds for the most commonly accessed files.
- NEW! Terabyte Volume Engine[™] defrags large volumes, SANs, RAIDs and NAS, quickly and thoroughly.
- NEW! Core enhancements provide faster, more thorough defragmentation

- **NEW!** Enhanced I/O Smart[™] intelligently provides transparent defragmentation ensuring uninterrupted system operation.
 - EXCLUSIVE! "Set It and Forget It" scheduling includes SmartScheduling™ for fully customized and automatic defragmentation based on individual usage patterns.
 - NEW! Enhanced user interface provides easy configuration and scheduling as well as reports on disk health, real-time performance and fragmentation statistics.
- NEW! Native 64-bit operating systems support.

Every system on your network needs Diskeeper, The Number One Automatic Defragmenter with over 17 million licenses sold!

Essential Taceo™ 1.6.2 Combines The Privacy Of Encryption With The Usage Control Of Access & Rights Management

Taceo surrounds your sensitive data with the security of a confidential envelope, ensuring that you maintain control over who can access your shared information and how it may be used (prevent editing, copy, printing, forwarding, and more).

Whether using the Outlook toolbar addin or securing files from the Taceo appli cation itself, protecting your sensitive information has never been this easy.

Taceo is simple to install and use:

- Usage controls prevent unauthorized access & use of sensitive information
- Encryption ensures your email can only be read by your intended recipients
- Validates the sender as legitimate
- Enables HIPAA, Sarbanes-Oxley, and Gramm-Leach-Bliley compliance

Received email or documents protected with Taceo? New recipients follow a download link in the message body to register their free Taceo account, allowing them to view protected content they receive at no charge. Simply use Taceo to open any protected email—the sender can control how, when, and even how long an intended recipient has access.

WHAT'S HAPPENING

Security Risk Management Is Self-Reliant

Disparate Systems Call For Global DataGuard Measures

by Chris A. MacKinnon

ARE YOU TIRED of being forced to implement a security posture by cobbling together discrete security appliances and applications from a myriad of competing security companies? If so, you can contact Dean A. Trumbull, chief operating officer at Global DataGuard, a Texas-based SRM (security risk management) company (www.global dataguard.com).

Trumbull says, "There are too many vendors, too many disparate security systems, and not enough actionable root-cause and resolution information. Many products focus on various specific aspects of network security, leaving the IT department responsible for selecting, integrating, managing, monitoring, and correlating discrete security events, alerts, logs, and reports into actionable security threats."

Trumbull believes it takes too long to connect the dots and determine how global threats, network attacks, and vulnerabilities affect network security. He says most security products are reactive and focused on explaining what happened instead of detecting threats before they happen.

Many organizations, already IT security budget-challenged, have a tough time deploying necessary organizational resources to operate successfully. Trumbull says, "This reality is obviously not sustainable in the long run, and there's now a growing consensus that the confluence of security requirements would be better addressed with an extensible systemic architectural approach designed to inherently incorporate all of these disparate applications into a single system, with one single administration/operations console, one set of reports, etc."

Enter SRM

In Trumbull's opinion, the concept of an extensible systemic architectural approach to

network security is now gaining traction among leading security companies and industry analysts. He notes that in a recent conference address, Cisco Chief Executive John Chambers predicted the end of pinpoint security applications and noted that to stop online threats, security needs to be integrated throughout the network with an underlying architectural approach and that small to medium-sized enterprises should be focusing now on how their security pieces integrate.

An important aspect of SRM is the realization that signature-only detection is inadequate to address the current state of network security attacks. A behavioral approach to deep packet analysis is now a requirement to address zero-day and other such attacks. Trumbull explains, "At the heart of SRM is a proprietary behavioral correlation engine that is actually the foundation upon which all other applications are built. This basic tenet of SRM enables each security application to leverage the rich data derived from the correlation of weeks of raw packet data, detected vulnerabilities, signature detection applications, posted vendor alerts, globally detected threats, as well as network access policy violations."

Trumbull says it's important to not mistake SRM for SIM (security information management) or SEM (security event management). He says, "A SIM/SEM is nothing more than a noble attempt to integrate a collection of security appliances that were never intended to work together. Consequently, they don't. SRM is not the aggregation of log information from disparate security appliance logs/alerts. The SIM/SEM approach has proved to be a complex, limited, and expensive approach to very loose integration."

In contrast, Trumbull says the SRM suite of truly integrated network sensors, scanners, and behavioral correlation modules are inherently designed to capture, retain, and behaviorally analyze packet-level network traffic, so there is no need to acquire logs and alerts from third-party devices. He says, "After all, relying on logs and alerts from other security devices that are routinely breeched makes relying on a SEM inherently untrustworthy. In addition, SEMs require knowing all present and future events for which rules need to be created."

Trumbull says for those organizations following the widely accepted "defense-in-depth" network security strategy, the SRM

economically delivers a security layer that augments and holistically provides oversight of an organization's security infrastructure without the requirement of uprooting or disrupting the existing security infrastructure. He says, "This self-reliant approach combines real-time flexibility, long-term correlation, and historical trending, with no maintenance and security business intelligence requirement. The behavioral difference and revolutionary approach is becoming the industry model for next-generation network security."

Challenges Facing SRM

Trumbull says SRM is a relatively new product category, and the work of "category creation" is challenging and expensive. He notes, "At the same time, existing network security incumbents are telling the SRM story but delivering a collection of disparate point solutions that are loosely integrated, usually for reporting purposes. They're standalone signature detection products, separately administered, and they

do not share security information in realtime to enhance detection. This is creating confusion with customers who quickly realize that what they're saying and what they're delivering are two different things."

To address industry challenges, Trumbull says Global DataGuard is working to educate industry analysts to better understand the unique underlying behavioral analysis and correlation engine required to enable the sharing of information between security applications and disciplines. He says this behavioral foundation enables true integration and is the primary distinction that lies at the heart of the SRM architectural approach and provides all security applications the behavioral edge.

Trumbull says the company is also trying to promote the virtues of the SRM architecture, which provides an extensible platform to incorporate ever expanding security applications. He says Global DataGuard has already leveraged the SRM architecture to incorporate several new security applications coming to market later this year, including behavioral NAM (network access monitoring), firewall and syslog monitoring, as well as antivirus, antispam, and content filtering applications.

Trumbull says what makes the SRM architecture so different and so much more effective is the way Global DataGuard's approach overlays and complements an existing network security infrastructure. The modular architecture lets customers mix and match applications to leverage their current investment and then add additional application modules incrementally and over time.

This summer Global DataGuard is introducing NSZ (network security zones), a network access control and monitoring capability (the industry's first NAC solution that's based solely on behavioral network analysis and correlation). With this solution, Trumbull says there is no need to install centralized network authentication equipment or install host-based agents on clients and no need to rearchitect the network to accommodate in-line security devices.

TWO TERMS

CAS (content-addressed storage)

What it is: CAS is a storage technolo-

gy that uses a document's content as the primary indicator of the document's location. Traditional storage technologies, to pinpoint the location of a document or file, refer to the physical location of the document or file, that is, location-addressable storage. CAS is a way to index the storage of documents according to content. But there is a caveat: CAS works best with documents that don't change often, such as permanent records required by regulations.

Why you should care: If your business manages a large number of records required by regulations such as Sarbox and HIPAA, CAS is a technology you might want to keep your eye on because it is specifically designed to manage those types of records. Also, if your business creates lots of permanent records that must be intelligently stored and archived, CAS may be for you.

Related products and manufacturers: Manufacturers and products include EMC (Centera family of CAS systems), Permabit (Compliance Store), and HP (StorageWorks Reference Information Storage System).

■ DR (disaster recovery)

What it is: Disaster recovery is the practice of preparing and implementing plans for protecting business data and systems in the case of a natural or manmade disaster. DR consists of the procedures, plans, backup software, hardware systems, and management practices that, combined, represent the business strategy for coping with and mitigating unplanned, catastrophic events.

Why you should care: If you don't pay attention to the possibility of a disaster, you are playing with fire. Recent hurricanes, wildfires, flooding, and the ever-present possibility of terrorist attacks should clearly emphasize to businesses the importance of DR planning and implementation. This is especially true for businesses that must comply with the plethora of regulatory requirements today; poor DR planning will not be an acceptable excuse for the loss of compliance records that regulations require.

Related products and manufacturers: DR services providers include Forsythe (Business Continuity/Disaster Recovery IT Advisory Solutions), GE (Disaster Recovery Services), North American Access Technologies (Mobile Emergency Datacenter), Delphire Group, and COOP Consulting.

Notification & Resolution For SMBs & The Enterprise

AlarmPoint

AlarmPoint

Next-generation AlarmPoint is an enterprise-wide notification and event resolution platform that centralizes all system events and provides repeatable resolution processes. The AlarmPoint product suite is built to automate event resolution by managing the needs of today's mobile workforce. Designed to filter, suppress, and enrich important events, route those events to the right person on any communications device, and give the person the ability to solve, escalate, or enlist others to resolve, AlarmPoint bridges the gap between business-critical IT services and relevant human resources.

Powerful system flexibility and capabilities

- Role-based Web user interface
- Intelligent event management
- Event assignment and subscription
- AlarmPoint now on any OS
 platform
- platform
 Localized UI language options for 12 languages

Discover the benefits of an easy-to-maintain event notification and resolution solution built for self-service automation.

- Contact and device management
- Personnel and group scheduling
- Acknowledgement from Web or any other device
- Self-service event reporting

The CyberAngel® Security Software— Encryption & Tracking "Hybrid"

The CyberAngel® Security Software is a unique "hybrid" solution for data protection and computer theft, combining Data Encryption, User Authentication, and Tracking/Recovery in a single and easily implemented solution. With strong industry-approved (and exportable) encryption, The CyberAngel® addresses Privacy Acts and recent Security Breach Notification Laws, which have enormous notification and liability costs, not to mention the loss of customers.

Custom configured for each client, The CyberAngel® can be triggered by a two-factor authentication or integrated with existing Windows or Novell passwords. If the authentication is violated, sensitive data and applications (such as a VPN) are encrypted and hidden from the unauthorized user, communication ports are blocked, and a covert signal is sent to The CyberAngel® monitoring center. After capturing the location of the computer, we will immediately send a real-time notification to the registered user or organization of the unauthorized attempt to access that computer. The CyberAngel® manages all technical support, password recovery, or anything else the end user may need. Our cost-effective software is compatible with current Windows operating systems, including Windows® 2000, Windows® XP (Home & Pro), and Windows® XP Tablet.

KEY FEATURES

- Encryption of Sensitive Data and Applications
- User Authentication (One or Two-Factor)
- Asset/Hardware Tracking & Recovery (LAN, WAN, WiFi, DSL, Modem, Cable, etc.)
- Restriction of Unauthorized Remote Access

INDUSTRY STATISTICS

- \bullet Over 57% of all network breaches are made from laptops. (FBI)
- 1 out of 10 laptops will be stolen or lost each year. (Gartner Group)
- 97% of stolen computers are never recovered. (FBI)
- 32 States have passed the Security Breach Notification Law, which only applies to unencrypted information.
- More than 32 million Americans have had sensitive personal data exposed over the past seven months and nearly 90 million since the ChoicePoint incident last year.
- 20% of the customers who received a notification of a breach terminated the relationship due to lack of trust. (Ponemon Study)
- \$14 million Average cost per company with a data breach. (Ponemon)

BitDefender 9 Professional Plus Now Includes Antispyware Protection!

BitDefender 9 Professional Plus integrates antivirus, antispyware, firewall, and antispam modules into one comprehensive security package, tailored to meet the needs of computer users worldwide.

Antivirus + Antispyware NEW!

The mission of this module is to ensure detection and removal of all viruses and spyware in the wild. BitDefender uses robust scan engines, certified by ICSA Labs, Virus Bulletin, Checkmark, CheckVir, and TÜV.

Firewall

The firewall module protects your data and your privacy by filtering the incoming and outgoing traffic, controlling cookies, and blocking malicious scripts and "XXX-dialer" type programs.

Antispam

Quite simply put, the BitDefender Antispam module deals with the problem of spam so you don't have to.

Altiris® Software Virtualization Solution™

STOP WORRYING ABOUT .DLL CONFLICTS

Software Virtualization Solution ensures applications use correct files and Registry settings, without modifying the OS and without interfering with other applications. This software management solution allows you to host multiple versions of an application on the same system without conflicts between older and newer files. And you can easily activate or deactivate your applications based on need by sending a single command to the client sys-

Software Virtualization Solution integrates with the Altiris service oriented management platform, so you benefit from native integration with Altiris' award-winning service, asset, and systems management solutions. EMA makes it easy to extend capabilities as your business grows and your business needs change.

Altiris® Software Virtualization Solution™ is a revolutionary approach to software management. By placing applications and data into managed units called Virtual Software Packages, Software Virtualization Solution allows you to instantly acti-

vate, deactivate, or reset applications and to avoid conflicts between applications, without altering the base Windows installation. Get more information about how Software Virtualization Solution can impact your organization. Get access to Altiris® Juice™, the exciting new site packed with SVS articles, tips, and

- · Eliminate application conflicts
- Instantly repair damaged applications
- Significantly reduce testing time for application rollouts
- On-demand application provisioning

Try Software Virtualization Solution FREE for 120 DAYS! Get your free 120-day, fully functional evaluation copy at

MGE Simplifies Asset Management & Supervision Of UPS Systems With New Enterprise Power Management Software

MGE's Enterprise Power Manager v2 can substantially lower costs for supervising single- and three-phase networked UPS systems compared to using major network management system platforms. Enterprise Power Manager can carry out a scan for all the UPS systems from MGE, using both XML and SNMP protocols. The open architecture of EPM enables the discovery of UPSes from any other vendor supporting the standard UPS management information base (MIB). It also discovers and manages other critical power components, such as Power over Ethernet (PoE) midspans, Intelligent Power Distribution Units (PDUs), Source Transfer Switches (STS), and rack monitoring systems to give administrators comprehensive control of their protected infrastructure.

This new release of Enterprise Power Manager addresses the

special needs of complex three-phase power systems, with the ability to draw any type of power architecture, with multiple levels of redundancy, and view the actual power flows on the GUI.

Accessible from the Internet and any workstation using a standard Web browser, users can click a UPS in the presented diagram to obtain detailed information about the operating and configuration parameters in a dedicated window. Enterprise Power Manager uses Secure Sockets Layer (SSL) encryption along with several levels of passwords for complete security. In the event of a power emergency, alarms are centralized and transmitted by email or through Short Message Service (SMS). The systems' real-time logging of events and operations helps users to conduct preventive maintenance of their various UPSes.

For more info, call: 800-523-0142 www.Processor.com/MGE2

Are backup and disaster recovery worries keeping you up at night . . . and your users down during the day?

StorageCraft ShadowProtect™ Server Edition will help end your backup headaches.

StorageCraft ShadowProtect™ creates an exact online backup of your entire system, including the operating system, applications, configuration settings, and critical data, with zero downtime. ShadowProtect™ provides a simple view to restore or update files and folders to your existing backup image files. Save backups to any disk device, including USB, FireWire, attached storage devices such as NAS and SAN, and any network location.

ShadowProtect™ Advantages:

- Create online server backups with zero downtime
- Reduce or eliminate backup windows
- · Restore files in minutes, not hours
- Reduce backup complexity while increasing backup reliability
- Back up only changed data for minimal storage consumption
- Backup image consolidation for simple management
- Schedule full or incremental backups
- Recover your servers remotely
- Mount point-in-time backups for simple file and folder recovery
- Update point-in-time backups
- · Bare-metal server recovery in minutes

To find out how simple and reliable disaster recovery can be, visit: www.processor.com/storagecraft

and learn how StorageCraft ShadowProtect™can help you sleep easier at night.

Software - Storage Advertisement

Addlogix SnapShot Disaster Recovery Software

What is Addlogix SnapShot: It is the most powerful and most complete computer system and data maintenance software. It allows computer users to easily and quickly fix their computer. It can recover lost and/or corrupted files or restore an entirely crashed system to a stable working state in seconds.

How it Works: Addlogix

SnapShot allows users to cre-

ate "snapshots" (maps of the hard disk sectors and the maps' indexing system) of the computer system and data at different times. Users can then select a specific snapshot to recover files or restore the entire system to. Theoretically, Addlogix SnapShot only takes 0.07% total hard disk space to create all the snapshots. However, each snapshot might contain different amount of user data; therefore each snapshot size might differ.

Selective Data Recovery: Addlogix SnapShot offers a unique feature that allows users to preserve or transfer files and data in the current snapshot to another snapshot during a restore process, and therefore not lose any data during the process. For example, users can create a snapshot of the current system before restoring to a selected snapshot. Or users can restore the system with the Advanced Data Synchronization option, which allows users to manually select the files they want to be transferred to the restored snapshot.

- Recover deleted, corrupted files
- · Restore an earlier version of a file
- Restore the entire system to a clean state after virus attacks
- Restore crashed system to working state
- Reset publicly shared system to clean, preconfigured states after each session
- Remove unwanted software installations
- · Back out a failed software deployment process
- Fix daily user or program problems
- Try out software products before actual deployments
- · Complete removal of Trojan Horse or spyware

AmeriVault Managed Online Backup Service Better Than Ever

ServerVault is AmeriVault's premier D2D managed backup service that features enterprise backup without the use of agents or plug-ins. ServerVault delivers trusted data protection that automatically synchronizes data backup and offsite storage by simply installing a client and leveraging existing Internet connectivity.

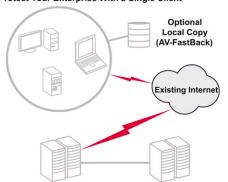

Still using tape?

Imagine backups happening in 1/10 of the time, automatically getting secured in a Tier 1 data center, compressed, and encrypted, ready for immediate restore with a few mouse clicks.

What about large restores?

AmeriVault deploys portable Mobile Vaults – disk devices that are shipped with large volumes of compressed data. They are highly reliable and plug right into a network for disk-to-disk recovery. Optionally, you may also choose to store a local D2D copy via AV-FastBack for LAN-speed restores or bare-metal recoveries.

ServerVault Managed Online Data Backup & Recovery Featuring block-level change, total automation and single instance Protect Your Enterprise With a Single Client

Mass Storage Vault

Replicated Continuity Vault

Key Advantages & Business Benefits

- Immediate Online Restores Save time for IT staff and end users
- Central Management Consolidate and standardize internal and remote backup
- Automatic Upgrades & Scaling We do the back-end, you can focus on other plans • Wide OS & DB Support - All major OSes, Cluster, VMware, Mac, Lotus Notes
- Expert Tech Support We help optimize service and expedite recovery
- Assured Recovery Digital signature technology verifies data integrity

About AmeriVault

- Nearly a decade in managed D2D service
- Replicated storage vaults
- SAS 70 certified
- Operating in five Tier-1 data centers
- Protecting data from 43 U.S. States

Preterminated Network Cabling

RAPIDNET PRETERMINATED NETWORK CABLING SYSTEM Category 6 and Fiber System Reduces Installation Time by More than 75%

Installing or upgrading your network has never been easier. RapidNet is a preterminated "plug and play" system that does not require onsite termination or certification testing. This dramatically reduces installation time—proven results show labor savings of more than 75%. Quality and performance are never compromised because each individual link is terminated and tested by HellermannTyton before being delivered to the site.

RapidNet is offered in high-performance Category 6 and fiber solutions ideal for many mission-critical data centers, enterprise data centers, storage area networks, and for disaster recovery and redundancy planning.

RapidNet's patented cassettes and modular, 19-inch panel make installation extremely quick. Each prelabeled cassette snaps easily into the modular panel. Removal of the cassette is just as easy—simply slide the latch forward and the cassette can be removed. HellermannTyton guarantees dependable installation and maximum performance of RapidNet with the 25-year Network Sciences warranty.

As one user says, "It took two of us only 20 minutes to install 24 lines of RapidNet, including carrying up the hardware, and that was the first time we'd ever installed it. It's amazing to think that we actually had some equipment up and live within 20 minutes."

Manufacturer Presentation _

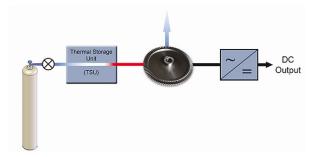

Physical - Power Protection Advertisement

The **CoolAir DC** is the first minute-for-minute alternative to batteries for UPS and telecom applications. Active Power was the first company to market a family of viable battery-replacement products: the CleanSource DC and CleanSource UPS, which are based on flywheel technology. The flywheel products have proven rugged and reliable in a wide variety of applications, but their relatively short backup times (compared to batteries) have been perceived as a disadvantage at sites where a backup generator is not present.

The **CoolAir DC** is a completely new design that provides ruggedness, reliability, and long backup times. The new product connects to a typical UPS exactly like a battery cabinet and provides exactly the same functionality, but without the unreliable performance and environmental issues of lead-acid batteries.

How does it work? The **CoolAir DC** stores energy in the form of compressed air and heat. During a utility outage, the compressed air is routed through a Thermal Storage Unit (TSU) to acquire heat energy. The heated air spins a simple turbine/alternator to produce electric power. The **CoolAir DC** also contains a small, continuous-duty flywheel to support the critical load during the brief period required for the turbine to spin up the speed.

The system is competitive in cost and footprint to quality batteries. The new system will handle the same challenging range of ambient temperatures and steploads as the flywheel-based products. Unlike flywheels, however, a single **CoolAir DC** module can provide up to 15 minutes of backup power under full load. For lighter loads, **CoolAir DC** can be configured to provide hours of backup power.

Winchester 24-Drive SATA Array with RAID 6 Data Protection

Supports up to eight hosts and 12TB in one enclosure.

The SATA-based RAID array lowers the cost per gigabyte of

RAID-protected SATA storage while offering high-reliability features such as N+1 power, enterprise-class SATA disks, and RAID 6 for added data protection.

The FlashDisk SA-4500 supports redundant 64-bit RAID controllers with dual Ultra320 SCSI host connectivity or up to eight Fibre Channel hosts and has high-availability features, including the new FlashDisk RAID 6 protection. The SA-4500 implements RAID 6 in hardware using a high-speed XOR engine on a dedicated ASIC, enabling FlashDisk SATA to maintain a RAID 5 level of performance with RAID 6 protection against multiple drive failures. Additional high-availability features include redundant I/O modules, cooling, power supplies, and BBUs. Every FlashDisk data storage solution includes the FlashConsole appliance, providing complete centralized management using any browser-based workstation on the LAN. FlashAlert, a 24-hour "call-home" remote monitoring and alert service is also included for one year.

Protection For Transportation Of Hard Drives

Perm-A-Store now provides Turtle Cases for popular Hard Drive configurations

- Enclosed external drives for PC applications
- Hot-swappable drives (with/without tray) for Server applications

As hard drives become more portable, users are looking for safe and efficient ways to transport and store drives with live data. These specialized cases are made of high-density polyethylene, a rugged, lightweight material that provides excellent impact protection. All Turtle cases are available with optional brass padlocks, which may be keyed alike at no extra cost.

These new Turtle hard drive cases are available in several configurations:

- One or two precut slot(s), manufactured to the exact dimensions of the unit to be transported
- Customizable configuration for one or two drives employs pluckable dense foam cubes that can be removed to securely fit drives of various sizes.
- The configuration shown on the right of the photo above is 10 drives placed in precut foam slots in a rugged, two-handle case with 6 butterfly latches.

Turtle cases were introduced in 1988 and have become the media transport standard because they deliver protection against impact, debris and temperature and humidity extremes.

Turtle Cases are also available for all tape formats (LTO, DLT/SDLT, 3590, 3592, 9840/9940, 8mm, AIT, VXA 4mm as well as CD/DVD and optical media). Various capacities and colors by format.

Turtle brand transport and storage cases are recommended by media manufacturers Imation, IBM and Sun/StorageTek because they provide specialized protection for data media.

Physical - Power Protection Advertisement

Pulsar MX 5000 RT UPS

Starts at \$3935

The new **Pulsar MX 5000 RT UPS** surpasses competing units with its 0.9 power factor delivering 4500 watts of power, built-in redundancy capabilities, hot-swappable batteries, and power modules, along with integrated output receptacles for true plugand-play functionality. With up to 18kW, this scalable solution provides the highest power density in the industry.

Designed to deliver the highest level of protection for 20 to 110 servers, the online double-conversion Pulsar MX UPS uses modular redundant architecture that can easily scale power and runtime as demand increases or when users require higher levels of availability. Using only 3U (5.25 inches high) for the combination of power and battery submodules, users can configure the new units as freestanding tower or rack-mounted systems.

With built-in network manageability, the Pulsar MX systems are ideal for protecting high-performance workstations and servers in operation-critical server and network rooms. The 5kVA compact unit features front access hot-swappable battery and power submodules, auto battery-test, multilingual LCD, and intuitive power management software. For extended backup time, users can add external battery modules to achieve up to two hours of runtime. To help preserve battery life, the Pulsar MX 5000 RT units accept wide input voltage and frequency ranges to avoid using the batteries unnecessarily. Standard internal bypass ensures added reliability by supplying utility power to connected equipment in the event of a UPS fault.

Software - Data Replication Advertisement

WANSync by XOsoft

The WAN-based business continuity platform and data recovery software.

WANSync, the definitive, WAN-based business continuity platform and data recovery software. This data protection solution provides companies with continuous business data flow and ensures seamless integrity, reliability, and redundancy of business-critical information resources. WANSync comprises a comprehensive suite of general-purpose synchronization and real-time data replication solutions, including:

WANSync Server—for server data replication and increased protection for application servers of any type, including open files and system settings.

A set of dedicated WANSync solutions provide specific application servers with complete availability assurance. These business continuity solutions include:

WANSync Exchange—an application-aware high availability platform for Microsoft Exchange, providing Exchange disaster recovery and Exchange replication.

WANSync SQL—the most comprehensive WAN-based disaster recovery platform for SQL databases, including SQL server replication and SQL data recovery capabilities.

WANSync Oracle—a disaster recovery solution tailored to handle the specific nuances of Oracle replication and Oracle database disaster recovery.

This unique 19" wallmount rack provides a generous 30" or 23" useable depth and has universal rack rails. It's available in 4U, 6U, and 8U and is perfect for IBM, Dell, Compaq, HP, and other rackmount servers. This rack allows mounting of equipment in a vertical "knobs up" fashion (visualize a pendaflex hanging folder). The equipment mounts to the backpan for even weight distribution.

Satisfaction Guaranteed

Environmental Monitoring

www.Processor.com/ISC2

Extend Your Equipment Life

The Thermostatic Fan Control extends both equipment & fan life by varying the fan speed based upon temperature. The fan control has three temperature ranges (80°-90°, 85°-95°, 90°-100°) and can be set to operate the fan speed either proportional to temperature, or to come on full speed when temperature threshold has been reached. The fan control can be mounted to rackrail brackets or any flat surface. www.Processor.com/ISC2

Servers > DIRECT

GO STRAIGHT TO THE SOURCE!

Accelerate your competitive advantage

Choose ServersDirect Systems powered by the innovative technology of the 64-bit Intel® Xeon® Processor with dual-processor functionality. Enjoy excellent performance and headroom for today's 32-bit applications. And protect your investments as you transition to 64-bit computing.

SDR-1500T

Designed for optimal performance while supporting maximum frequency dual-core Xeon® 5000/5100 sequence processorsin a high-density 1U form-factor

\$2,499

Features

- 1U Rackmount Chassis with 700W Power Supply
- Intel® 64-bit Xeon™ 3.0/2x2M/667FSB (Dual Processor Option)
- Intel® 5000P (Blackford) Chipset
- Kingston 1024MB 667MHz DDR2 ECC FB-DIMM (2pcs x 512MB)
- 4pcs x WD4000YR, SATA 7200RPM hard drive
- 4 x 1" Hot-swap SATA Drive Bays
- RAID 0, 1, 5, 10 support
- Intel® (ESB2/Gilgal) 82563EB Dual-port Gigabit Ethernet Controller

2U Entry Level Server SDR-2500T

Optimize performance with processors and FBDIMM memory

- Intel® 64-bit Xeon™ 3.0/2x2M/1066FSB (Dual Processor Option)
- 2U rack designed with 550W Power Supply
- Intel® 5000P (Blackford) Chipset
- Kingston 1024MB 667MHz DDR2 ECC FB-DIMM
- 1pc x Western Digital WD4000YR, SATA 7200RPM HD
- 6 x 1" Hot-swap SATA Drive Bays
- · ATI ES1000 Graphics with 16MB video memory
- Intel® (ESB2/Gilgal) 82563EB Dual-port Gigabit Ethernet Controller
- RAID 0, 1, 5, 10 support

\$1,999

3U Application Server SDR-3500T

This equation is ideal for intense computing environments and business-critical applications

- Intel® 64-bit Xeon™ 3.<u>2/2x2M/1066FSB</u>
- (Dual Processor Option)
- 3U Chassis with 650W Redundant Power Supply
- Intel® 5000P (Blackford) Chipset
- Kingston 1024MB 667MHz DDR2 ECC FB-DIMM (2x512MB)
- 1pc x 3Ware 9550SX-12 port RAID Controller Card
- 12pcs x Western Digital 250GB SATA RAID Drive
- ATI ES1000 Graphics with 16MB video memory
- Intel® (ESB2/Gilgal) 82563EB Dual-port Gigabit Ethernet
- RAID 0, 1, 5, 10 support

- Intel® 64-bit Xeon™ 3.2/2x2M/1066FSB
 - 3U Chassis with 650W Redundant Power Supply

3U Database Server

Outstanding performance with dual-core

for storage and business applications

SDR-3500T

- Intel® 5000P (Blackford) Chipset
- Kingston 1024MB 667MHz DDR2 ECC FB-DIMM (2x512MB)
- 2pcs x 3Ware 9550SX-8 port
- ATI ES1000 Graphics with 16MB video memory
- Intel® (ESB2/Gilgal) 82563EB Dual-port Gigabit Ethernet
- RAID 0, 1, 5, 10 support

\$5,899

5U Advanced Storage Server SDR-5500T

Powered by the latest dual-core Xeon 5000/5100® storage capacity available in a 5U format

- Intel® 64-bit Xeon™ 3.2/2x2M/1066FSB
- 5U Chassis, 24 hot-swap bays & 950W redundant
- Intel® 5000P (Blackford) Chipset
- Kingston 1024MB 667MHz DDR2 ECC FB-DIMM
- 1pc x 3Ware 9550SX-12 port RAID Controller Card • 12pcs x Western Digital 400GB SATA RAID Drive
- ATI ES1000 Graphics with 16MB video memory
- Intel® (ESB2/Gilgal) 82563EB Dual-port Gigabit **Ethernet Controller**
